

**College of Engineering
King Khalid University**

Bachelor of Science (BSc.) in Electrical Engineering

**Program Study Plan
(Distribution of Courses over Different Levels)**

Table of Contents

First Year- Common Engineering Year	1
Second Year- Electrical Engineering Year	2
Third Year- Electrical Engineering Year.....	3
Fourth Year- Electrical Engineering Year	4
Third Year- Electrical Engineering Year.....	5
General Course Requirements.....	6
General Education	6
Mathematics & Basic Sciences	6
Common Engineering Courses	7
Electrical Engineering Courses	7
Distribution of Credit Hours and Contact Hours	10
Descriptions of BSc. Electrical Engineering Courses.....	11
Math & Basic Sciences.....	12
General Chemistry.....	12
Differentiation and Integration (I)	13
Algebra and Geometry	14
Physics (I)	15
Computer Science	16
Differentiation and Integration (II)	18
Differentiation and Integration (III)	19
Differential Equations	20
Principles of Statistics and Probability.....	21
Computer for Engineers.....	22
Numerical Analysis	23
Common Engineering Courses.....	24
Engineering Drawing-1	24
Production Technology and Workshop	25

Electrical Engineering1.....	27
Engineering Economy	28
General Education	29
Intensive English Program (1)	29
Intensive English Program (II)	31
The Entrance to the Islamic culture (I).....	33
Islamic culture (II)	34
Islamic culture (III)	35
Islamic culture (IV)	36
Arabic Language Skills	37
Arabic Editing	39
Technical Reports Writing	40
Electrical Engineering Courses	42
Electric Circuits-2	42
Measurement and Measuring instruments.	43
Electronic Engineering	44
Electromagnetic Fields.....	46
Logic Circuits	47
Energy Conversion	48
Signal Processing	49
Electronic Circuits-1.....	50
Computerized Methods for Engineering.....	51
Principles of electrical machines	53
Automatic Control	54
Communication Systems.....	55
Computer Organisation-1.....	56
High Voltage Engineering.....	57
Electronics Circuits-2	59
Computer Organisation-2.....	60
Power Systems	61
VLSI Design.....	62
Microprocessor Based System	64
Power Electronics.....	65

Operating Systems	66
Power System Analysis	67
Advanced Communication Systems	68
Software Engineering	70

Course Code	Course Title	Weekly Distribution of Credit Hours				Prerequisites	Co-requisites
		Lectures	Lab	Credit Hours	Contact Hour		
First Year - First Level

Descriptions of BSc. Electrical Engineering Courses

Electrical Engineering Courses

Course Title	Electric Circuits-2	Coordinator			
Course Code	221-EE-4	Credit Hrs.	4	Contact Hrs.	5
Prerequisites	211-EE-5	Level/Year		6/2	
Course Objective:					
<ul style="list-style-type: none"> □ The main purpose of this course is to teach the students the design and analysis of electric circuits. □ To understand the relation between three phase variables and to analyze three phase circuits. □ To understand, how to analyze mutually coupled circuits. 					
Teaching Method:					
<ul style="list-style-type: none"> □ Lectures, Training exercises (Tutorial + Labs, Assignments, Reports) 					
Expected Learning Outcome:					
<ul style="list-style-type: none"> □ To understand knowledge of societal, health, safety, legal management, sustainability and cultural issues and the consequent responsibility reverent to Electrical Engineering □ An ability to design and conduct experiments, analyze and interpret data □ The ability to function on multidisciplinary teams 					
Course Contents:					
Unit 1:	<ul style="list-style-type: none"> □ Transient behavior of electrical circuits 				
Unit II :	<ul style="list-style-type: none"> □ Transient analysis of RL and RC circuits. □ Transient analysis of RLC series and parallel circuits. □ Three phase circuits 				
Unit III:	<ul style="list-style-type: none"> □ Mutually coupled circuits 				
Unit IV:	<ul style="list-style-type: none"> □ Series and parallel resonance, First order filters, 				
Unit V :	<ul style="list-style-type: none"> □ Two Ports Networks 				
Text Book (s):					
<ul style="list-style-type: none"> □ Alexandar, Mathew, " Fundamentals of electric circuits", 4th Edition 					
Mode of Evaluation:					
<ul style="list-style-type: none"> • Mid-Term Tests (20 %) • Practical Work, Assignments, Quizzes, Homework..... (40 %) • Final Exam. (40 %) 					

Course Title	Electric Measurements	Coordinator	
Course Code	222-EE-4	Credit Hrs.	4
Prerequisites	211-EE-5	Level/Year	6/2
Course Objective:			
<ul style="list-style-type: none"> □ Awareness for the importance of understanding and selection of the suitable measurement instruments in the electrical sites. □ Ability to work independently and as part of a team 			
Teaching Method:			
<ul style="list-style-type: none"> □ Lectures, Training exercises (Tutorial + Labs, Assignments, Reports) 			
Expected Learning Outcome:			
<ul style="list-style-type: none"> □ To define knowledge of mathematics, science and engineering fundamentals relevant to engineering, together with in depth knowledge of EE □ An ability to design a system, component or process to meet desired needs within realistic constraints. □ An ability to identify, formulate, and solve engineering problems □ An understanding of professional and ethical responsibility 			
Course Contents:			
Unit I:	<ul style="list-style-type: none"> □ Classification of measurement methods Definitions of Measurement: 		
Unit II :	<ul style="list-style-type: none"> □ The DC instruments PMMC 		
Unit III:	<ul style="list-style-type: none"> □ The Rectification instruments: Ammeter – Voltmeter □ The Rectification circuits and analysis 		
Unit IV:	<ul style="list-style-type: none"> □ Theory of the AC instruments □ The Electrodynamometer wattmeter – errors 		
Unit V :	<ul style="list-style-type: none"> □ The Bridge measurements □ The CRO (construction and operation) 		
Text Book (s):			
<ul style="list-style-type: none"> □ Modern Electronic Instrumentation and Measurement Techniques.", by A D Helfrick & W D Cooper, Prentice Hall International 			
Reference Book (s):			
<ul style="list-style-type: none"> □ A.K.Sawhney, (1985), “Electrical and Electronic Measurements and instrumentation”,Dhanpat Rai & Sons 			
Mode of Evaluation:			
<ul style="list-style-type: none"> • Mid-Term Tests (20 %) • Practical Work, Assignments, Quizzes, Homework..... (40 %) • Final Exam. (40 %) 			

Course Title	Electronic Engineering	Coordinator			
Course Code	223-EE-4	Credit Hrs.	4	Contact Hrs.	5
Prerequisites	211-EE-5, 219-MATH-5	Level/Year	6/2		
Course Objective:					
<ul style="list-style-type: none"> □ To inculcate in students with the basic working principle of different electronic devices and their applications in the modern electronic systems. 					
Teaching Method:					
<ul style="list-style-type: none"> □ Lectures, Training exercises (Tutorial + Labs, Assignments, Reports) 					
Expected Learning Outcome:					
<ul style="list-style-type: none"> □ The broad education necessary to understand the impact of nengineering solutions in a global, economic, environmental and societal context. □ An ability to identify, formulate, and solve engineering problems. □ An understanding of professional and ethical responsibility 					
Course Contents:					
Unit 1:	SEMICONDUCTOR BASICS <ul style="list-style-type: none"> □ Atomic structure □ Conductors, Semiconductors and insulators □ N-type, P-type Semiconductors 				
Unit II :	DIODES <ul style="list-style-type: none"> □ Diode V-I Characteristic Carve □ Diode Models, Diode testing □ DIODE APPLICATIONS □ Half wave Rectifier & Bridge Rectifier □ Filters, Limiters, Voltage Regulators 				
Unit III:	SPECIAL –PURPOSE DIODES <ul style="list-style-type: none"> □ Zener diodes □ Varacter Diodes □ Other Types 				
Unit IV:	BJT <ul style="list-style-type: none"> □ The transistor as an amplifier □ The transistor as a switch 				
Unit V :	TRANSISTOR BAIIS CIRCUITS <ul style="list-style-type: none"> □ DC operating point □ Voltage divider bias □ Common emitter bias 				
Text Book (s):					
<ul style="list-style-type: none"> □ Electronic Devices (Electron Flow Version), 9th Edition by Thomas L. Floyd 					

Mode of Evaluation:

- Mid-Term Tests (20 %)
- Practical Work, Assignments, Quizzes, Homework..... (40 %)
- Final Exam. (40 %)

Course Title	Electromagnetic Fields	Coordinator			
Course Code	311-EE-4	Credit Hrs.	4	Contact Hrs.	5
Prerequisites	219-MATH-5, 211-EE-5	Level/Year		7/3	
Course Objective:					
<ul style="list-style-type: none"> □ To inculcate in students with different aspects of Electromagnetic fields and its applications in modern world communication systems. □ By the end of the course, the student should be familiar with the following topics: Vector 					
Teaching Method:					
<ul style="list-style-type: none"> □ Lectures, Training exercises (Tutorial + Labs, Assignments, Reports) 					
Expected Learning Outcome:					
<ul style="list-style-type: none"> □ Ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. □ Knowledge of contemporary Issues. □ An ability to communicate effectively. □ An ability to identify, formulate, and solve engineering problems. □ To define knowledge of mathematics, science and engineering fundamentals relevant to engineering, together with in depth knowledge of EE 					
Course Contents:					
Unit 1:	□ Vector Algebra, Co-ordinate Systems and Transformations,				
Unit II :	□ Vector Calculus, Electrostatic Fields				
Unit III:	□ Electric Fields in Material Space, Magnetostatic Fields				
Unit IV:	□ Magnetic Forces, Materials and Devices.				
Unit V :	□ Applications of Electromagnetic Fields.				
Text Book (s):					
□ Elements of Electromagnetics, By Matthew N. O. Sadiku, Oxford University Press					
Mode of Evaluation:					
<ul style="list-style-type: none"> • Mid-Term Tests (20 %) • Practical Work, Assignments, Quizzes, Homework..... (40 %) • Final Exam. (40 %) 					

Course Title	Logic Circuits	Coordinator			
Course Code	312-EE-4	Credit Hrs.	4	Contact Hrs.	5
Prerequisites	211-EE-5	Level/Year		8/3	
Course Objective:					
<ul style="list-style-type: none"> □ Understand the basic theorems for logic circuits, principles of operations and their models. □ Analysis of numerical conversion methods and different applications for logic circuits. 					
Teaching Method:					
<ul style="list-style-type: none"> □ Lectures, Training exercises (Tutorial + Labs, Assignments, Reports) 					
Expected Learning Outcome:					
<ul style="list-style-type: none"> □ To define knowledge of mathematics, science and engineering fundamentals relevant to engineering, together with in depth knowledge of EE. □ An ability to apply Knowledge of mathematics, science and engineering. □ Recognition of the need for and an ability to engage in lifelong learning 					
Course Contents:					
Unit 1:	<ul style="list-style-type: none"> □ Review on number systems □ Switching function 				
Unit II :	<ul style="list-style-type: none"> □ Design using NAND and NOR gates □ Storage devices □ Sequential circuits 				
Unit III:	<ul style="list-style-type: none"> □ Adders □ Subtractors □ Decoders 				
Unit IV:	<ul style="list-style-type: none"> □ Coders □ Multiplexer/de-multiplexer □ Memories (ROM,PLA, RAM). 				
Unit V :	<ul style="list-style-type: none"> □ Introduction to microprocessors. 				
Text Book (s):					
<ul style="list-style-type: none"> □ Moris, "Digital Design", Prentice Hall, most recent edition Specific course information 					
Mode of Evaluation:					
<ul style="list-style-type: none"> • Mid-Term Tests (20 %) • Practical Work, Assignments, Quizzes, Homework..... (40 %) • Final Exam. (40 %) 					

Course Title	Energy Conversion	Coordinator	
Course Code	313-EE-4	Credit Hrs.	4
Prerequisites	221-EE-4	Level/Year	7/3
Course Objective:			
<ul style="list-style-type: none"> □ Classify the types of energy sources. □ Define the different components of electromechanical energy converters. □ Mention the main basis of energy conversion 			
Teaching Method:			
<ul style="list-style-type: none"> □ Lectures, Training exercises (Tutorial + Labs, Assignments, Reports) 			
Expected Learning Outcome:			
<ul style="list-style-type: none"> □ To understand knowledge of societal, health, safety, legal management, sustainability and cultural issues and the consequent responsibility reverent to Electrical Engineering □ An ability to design and conduct experiments, analyze and interpret data □ The ability to function on multidisciplinary teams 			
Course Contents:			
Unit 1:	<ul style="list-style-type: none"> □ Introduction – Magnetic circuit- Flux, flux density □ Introduction to electromechanical energy conversion, energy sources, energy, co-energy, storage energy. 		
Unit II :	<ul style="list-style-type: none"> □ Introduction To Rotating Machines - AC And DC Machines □ Elementary Concepts □ multi-excited system 		
Unit III:	<ul style="list-style-type: none"> □ Introduction To AC And DC Machines □ MMF Of Distribution Winding □ Generated Voltage □ Torque In Non-Salient Pole Machines-MMF Of Distribution Winding 		
Unit IV:	<ul style="list-style-type: none"> □ Rotating MMF Waves In AC Machines □ Renewable Energy 		
Unit V :	<ul style="list-style-type: none"> □ Solar Energy- solar cell □ Wind Energy 		
Text Book (s):			
<ul style="list-style-type: none"> □ Electric Machinery by fitzgerald 			
Mode of Evaluation:			
<ul style="list-style-type: none"> • Mid-Term Tests (20 %) • Practical Work, Assignments, Quizzes, Homework..... (40 %) • Final Exam. (40 %) 			

Course Title	Signal Processing	Coordinator		
Course Code	322-EE-4	Credit Hrs.	4	Contact Hrs. 5
Prerequisites	319-MATH-5, 219-MATH-5	Level/Year	9/3	
Course Objective:				
<ul style="list-style-type: none"> □ To understand the scenario of the telecommunication technique. □ To classify signals and systems. □ To understand the benefits of signals" operation. □ To learn to implement the important signals, and the reasons behind their importance. 				
Teaching Method:				
<ul style="list-style-type: none"> □ Lectures, Training exercises (Tutorial + Labs, Assignments, Reports) 				
Expected Learning Outcome:				
<ul style="list-style-type: none"> □ To define knowledge of mathematics, science and engineering fundamentals relevant to engineering, together with in depth knowledge of EE □ An ability to identify, formulate, and solve engineering problems □ An understanding of professional and ethical responsibility 				
Course Contents:				
Unit 1:	<ul style="list-style-type: none"> □ Continuous time (CT) and discrete-time (DT) signals, □ Basic system properties. Linear time-invariant (LTI) systems □ Discrete-time LTI systems 			
Unit II :	<ul style="list-style-type: none"> □ The convolution sum, Continuous-time LTI systems □ Properties of LTI systems. 			
Unit III:	<ul style="list-style-type: none"> □ Fourier series representation of periodic signals. □ Fourier series representation of discrete Signals. 			
Unit IV:	<ul style="list-style-type: none"> □ The properties of continuous-time Fourier transform. □ The discrete-time & Continuous-time Fourier transform 			
Unit V :	<ul style="list-style-type: none"> □ The Z-transform: Region of convergence, The Inverse Z-transform, Properties of the Z-transform. 			
Text Book (s):				
<ul style="list-style-type: none"> □ Oppenheim, Willsky, and Nawab, "Signal and Systems", Prentice Hall, most recent edition □ Edward W. Kamen and Bonnie S. Heck, Fundamentals of Signals and Systems, using the WEB and Matlab, Pearson Prentice Hall, Inc., New Jersey, 3rd Edition, 2007 				
Reference Book (s):				
<ul style="list-style-type: none"> □ Haykin, and Veen, "Signal and Systems", John Wiley, most recent edition. □ Ifeachor Jervis, "Digital Signal Processing", A practical approach, Pearson Prentice Hall, Inc., 2nd Edition. □ Proakis, Digital Communication, McGraw Hill, Inc., 4th Edition. 				
Mode of Evaluation:				
<ul style="list-style-type: none"> • Mid-Term Tests (20 %) • Practical Work, Assignments, Quizzes, Homework..... (40 %) • Final Exam. (40 %) 				

Course Title	Electronic Circuits-1	Coordinator			
Course Code	323-EE-4	Credit Hrs.	4	Contact Hrs.	5
Prerequisites	223-EE-4	Level/Year		9/3	
Course Objective:					
<ul style="list-style-type: none"> □ The main purpose of this course is to teach the students the design and analysis of electronic amplifier circuits 					
Teaching Method:					
<ul style="list-style-type: none"> □ Lectures, Training exercises (Tutorial + Labs, Assignments, Reports) 					
Expected Learning Outcome:					
<ul style="list-style-type: none"> □ The broad education necessary to understand the impact of nengineering solutions in a global, economic, environmental and societal context. □ Knowledge of contemporary Issues. □ An ability to communicate effectively. □ An ability to identify, formulate, and solve engineering problems. □ An understanding of professional and ethical responsibility 					
Course Contents:					
Unit 1:	<ul style="list-style-type: none"> □ Amplifier operation, Transistor AC equivalent circuits □ BJT Amplifiers □ Common-Emitter, Common-base, Common-Collector □ Darlington pair □ Multistage Amplifier 				
Unit II :	<ul style="list-style-type: none"> □ FETs □ JFET Characteristics and Parameters □ JFET Biasing Techniques & Stability □ The MOSFET Transistors Characteristics and Parameters 				
Unit III:	<ul style="list-style-type: none"> □ FET Amplifiers: Common Source, Common Drain, Common-Gate 				
Unit IV:	<ul style="list-style-type: none"> □ Power Amplifiers □ Class A & B Power Amplifiers □ Power Amplifiers 				
Unit V :	<ul style="list-style-type: none"> □ Class AB □ Push-Pull Amplifier □ Amplifiers Frequency Response □ Low frequency Response □ High frequency Response 				
Text Book (s):					
<ul style="list-style-type: none"> □ Electronic Devices , 2nd edition, Thomas Floyd, Pearson 					
Mode of Evaluation:					
<ul style="list-style-type: none"> • Mid-Term Tests (20 %) • Practical Work, Assignments, Quizzes, Homework..... (40 %) • Final Exam. (40 %) 					

Course Title	Computerized Methods for Engineering	Coordinator			
Course Code	324-EE-4	Credit Hrs.	4	Contact Hrs.	5
Prerequisites	319-MATH-5, 101-CS-5	Level/Year		9/3	
Course Objective:					
<ul style="list-style-type: none"> □ The course is intended to develop an understanding and ability of the implementation of mathematical techniques on a digital computer. □ Memorize syntax of Matlab commands. 					
Teaching Method:					
<ul style="list-style-type: none"> □ Lectures, Training exercises (Tutorial + Labs, Assignments, Reports) 					
Expected Learning Outcome:					
<ul style="list-style-type: none"> □ Ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. □ Knowledge of contemporary Issues. □ An ability to communicate effectively. □ An ability to identify, formulate, and solve engineering problems. <p>To define knowledge of mathematics, science and engineering fundamentals relevant to engineering, together with in depth knowledge of EE</p>					
Course Contents:					
Unit 1:	<ul style="list-style-type: none"> □ Basics of Matrices and linear algebra □ Solutions of Linear Equations: □ Direct Methods: □ Cramer's Rule, □ Matrix Inversion Method, □ Gaussian Elimination Method, □ Gauss - Jordan Method, □ Matlab implementation 				
Unit II :	<ul style="list-style-type: none"> □ Iterative Method: □ Jacobi Method, □ Gauss - Seidal Method, □ Matlab implementation 				
Unit III:	<ul style="list-style-type: none"> □ Solutions of Non-Linear Equations: □ Root of a function, condition for root to lie between to end-points, □ Bisection Method, □ Secant Method, □ Newton-Raphson Method, □ Matlab implementation. 				
Unit IV:	<ul style="list-style-type: none"> □ Solution of Ordinary Differential Equations: □ 1st order differential equation, 				

	<ul style="list-style-type: none"> □ nth order differential equation, □ Solution of 1st order D.E: Taylor Series, Euler's Method, □ Modified Euler's Method, □ Runge – Kutta Methods
Unit V :	<ul style="list-style-type: none"> □ Matlab programming to solve differential equations □ Systems of O.D. Equations and Higher Order Diff. equations.
Text Book (s):	
<ul style="list-style-type: none"> □ Numerical Methods, R.V.Dukkipati., 2010, New Age International Publishers 	
Reference Book (s):	
<ul style="list-style-type: none"> □ Introduction to numerical analysis Using MATLAB, Rizwan Butt, 2009, Jones and Bartlett Publisher. 	
Mode of Evaluation:

Course Title	Principles of electric machines	Coordinator			
Course Code	411-EE-4	Credit Hrs.	4	Contact Hrs.	5
Prerequisites	313-EE-4	Level/Year		10/4	
Course Objective:					
<ul style="list-style-type: none"> □ At the end of this course, the student should be able to study DC machines, transformer and AC machines. 					
Teaching Method:					
<ul style="list-style-type: none"> □ Lectures, Training exercises (Tutorial + Labs, Assignments, Reports) 					
Expected Learning Outcome:					
<ul style="list-style-type: none"> □ To define knowledge of mathematics, science and engineering fundamentals relevant to engineering, together with in depth knowledge of EE. □ An ability to apply Knowledge of mathematics, science and engineering. □ Recognition of the need for and an ability to engage in lifelong learning 					
Course Contents:					
Unit 1:	<ul style="list-style-type: none"> □ Construction and Types of DC Machines: □ DC generator characteristics. □ Characteristics and starting of DC motors: □ Construction of single phase transformer and difference between ideal and practical transformers. 				
Unit II :	<ul style="list-style-type: none"> □ Three phase induction motors: construction, theory of operation, equivalent circuit. □ Exact and approximate equivalent circuits. Transformer characteristics. Transformer parameters determination, 				
Unit III:	<ul style="list-style-type: none"> □ Characteristics of 3-phase induction motor, starting and speed control of 3-phase induction motors 				
Unit IV:	<ul style="list-style-type: none"> □ 3-ph Synchronous Machines: Construction and EMF 				
Unit V :	<ul style="list-style-type: none"> □ Phasor diagram. Loading conditions, voltage regulation.

Course Title	Automatic Control	Coordinator	
Course Code	412-EE-4	Credit Hrs.	4
Prerequisites	221-EE-4, 319MATH-	Level/Year	10/4
Course Objective:			
<ul style="list-style-type: none"> □ This course introduces the design of feedback control systems as applied to a variety of air and spacecraft systems. □ Topics include the properties and advantages of feedback systems, time-domain and frequency-domain performance measures, stability and degree of stability, the Root locus method, Nyquist criterion, frequency-domain design, and state space methods 			
Teaching Method:			
<ul style="list-style-type: none"> □ Lectures, Training exercises (Tutorial + Labs, Assignments, Reports) 			
Expected Learning Outcome:			
<ul style="list-style-type: none"> □ To understand knowledge of societal, health, safety, legal management, sustainability and cultural issues and the consequent responsibility reverent to Electrical Engineering □ An ability to design and conduct experiments, analyze and interpret data □ The ability to function on multidisciplinary teams 			
Course Contents:			
Unit 1:	Introduction and System Modeling		
Unit II :	Block Diagram reduction technique		
Unit III:	Performance of Feedback Control System		
Unit IV:	Control of feedback control system		
Unit V :	Frequency response		
Text Book (s):			
<ul style="list-style-type: none"> □ „KATSUHIKO OGATA, Modern Control Engineering, Fourth Edition“ 2003

Course Title	Communication Systems	Coordinator	
Course Code	413-EE-4	Credit Hrs.	4
Prerequisites	322-EE-4, 329-MATH-3	Level/Year	11/4
Course Objective:			
<ul style="list-style-type: none"> □ Understand the analysis of communication systems. □ Analysis of types of modulation systems types of receivers, transmitters and multiplexing methods. □ Understand The digital representation of analog signals, and have introduction to information theory and Coding. □ Apply the communication systems on Lab 			
Teaching Method:			
<ul style="list-style-type: none"> □ Lectures, Training exercises (Tutorial + Labs, Assignments, Reports) 			
Expected Learning Outcome:			
<ul style="list-style-type: none"> □ To define knowledge of mathematics, science and engineering fundamentals relevant to engineering, together with in depth knowledge of EE □ An ability to design a system, component or process to meet desired needs within realistic constraints. □ An ability to identify, formulate, and solve engineering problems □ An understanding of professional and ethical responsibility 			
Course Contents:			
Unit 1:	□ Review of spectrum for periodic and aperiodic signals – continuous and line spectra		
Unit II :	□ Linear modulation: Need for modulation, Expression for AM wave, power and BW, expression for DSB-SC/SSB, power and BW, comparison		
Unit III:	□ Modulation and Demodulation of AM – Rectifier detector, envelope detector, Product Modulation and demodulation of DSB-SC, SSB – Frequency discrimination method, Hilbert transform, Phase discrimination method		
Unit IV:	□ Angle Modulation: FM expression, Bessel function analysis, power and BW considerations, Carsons rule for BW approximation, PM expression, relationship between FM and PM, Armstrong method of FM generation, PLL and FM demodulation using PLL		
Unit V :	□ Introduction to Information theory – Entropy, Source coding: Huffman code, Shannon Fano code.		
Text Book (s):
