## A. General information about the course:

### 1. Course Identification

#### 1. Credit hours: ( 3 )

0 L + 6 P = 3

#### 2. Course type

A.	<input type="checkbox"/> University	<input type="checkbox"/> College	<input checked="" type="checkbox"/> Department	<input type="checkbox"/> Track	<input type="checkbox"/> Others
B.	<input checked="" type="checkbox"/> Required		<input type="checkbox"/> Elective		

#### 3. Level/year at which this course is offered: ( 3<sup>rd</sup> /2<sup>nd</sup> )

#### 4. Course General Description:

One of the best ways to communicate one's ideas is through some form of picture or drawing. This is especially true for the engineer. An engineering drawing course focuses on usage of drawing instruments, lettering, construction of geometric shapes, etc. Students study the use of dimensioning, shapes, and angles or views of such drawings. Dimensions feature prominently, with a focus on interpretation, importance, and accurate reflection of dimensions in engineering drawing. Other areas of study in this course may include projected views and the development of surfaces. This course covers an overview of using drawing tools, and to learn drawing isometric, orthographic projections, and sectional views, standards and conventions in drawing and dimensioning, and detailed drawings.

#### 5. Pre-requirements for this course (if any):

NIL

#### 6. Pre-requirements for this course (if any):

NIL

#### 7. Course Main Objective(s):

- Recognize the principles of engineering drawing.
- Acquire imagination skills for projections of engineering parts.
- Master the use of engineering drawing tools.

### 2. Teaching mode (mark all that apply)

No	Mode of Instruction	Contact Hours	Percentage
1	Traditional classroom	90	100
2	E-learning		
3	Hybrid <ul style="list-style-type: none"> <li>• Traditional classroom</li> <li>• E-learning</li> </ul>		
4	Distancelearning		

### 3. Contact Hours (based on the academic semester)

No	Activity	Contact Hours
1.	<b>Lectures</b>	
2.	<b>Laboratory/Studio</b>	90
3.	<b>Field</b>	
4.	<b>Tutorial</b>	
5.	<b>Others (specify)</b>	
<b>Total</b>		90

### B. Course Learning Outcomes (CLOs), Teaching Strategies and Assessment Methods

Code	Course Learning Outcomes	Code of CLOs aligned with program	Teaching Strategies	Assessment Methods
<b>1.0</b>	<b>Knowledge and understanding</b>			
1.1	Identify the principles of engineering drawing related to isometric, orthographic projection, and sectioning	<b>PLO1.1</b>	Lectures and training exercises	Class work - home work, and final exams.
1.2	Express imagination skills in the projections of engineering parts	<b>PLO1.1</b>	Lectures and training exercises	Class work - home work, and final exams.
<b>2.0</b>	<b>Skills</b>			
2.1	Practice the use of engineering drawing tools.	<b>PLO2.3</b>	Lectures and training exercises	Class work - home work, and final exams.
<b>3.0</b>	<b>Values, autonomy, and responsibility</b>			
...				

### C. Course Content

No	List of Topics	Contact Hours
1.	Sheet Sizes, Scales, Lines and Lettering, Scales Lettering – Engineering drawing tools and their using	12
2.	Tangency operations	12

3.	Projections – Isometric views	18
4.	Projections –Multiple views	12
5.	Free hand sketch – Dimensions	12
6.	Missing views	12
7.	Sectional Orthographic Projections Surfaces intersections, relations between point, line and surface	12
Total		90

#### D. Students Assessment Activities

No	Assessment Activities *	Assessment timing (in week no)	Percentage of Total Assessment Score
1.	Class Work	Throughout	20 %
2.	Home Work	Throughout	20 %
11.	Mid Exams I & II	Midway (8 & 13)	30%
12.	Final Exam		30%
13.	Total		100%

\*Assessment Activities (i.e., Written test, oral test, oral presentation, group project, essay, etc.).

B.	<input checked="" type="checkbox"/> Required		<input type="checkbox"/> Elective		

#### 3. Level/year at which this course is offered: ( 3<sup>rd</sup> /2<sup>nd</sup> )

### 4. Course general Description:

Material science is a core mechanical engineering subject and a prerequisite for engineering student. This course give student the fundamental information about what are inside the material by this way student can understand different processing of materials such as mechanical testing and also deformation of materials. The conventional method of classroom interaction between the teacher and student is essential for teaching this subject. At the same time, practical experiments are conducted. All these methods are being followed and any improvement in the implementation shall be made as per the feedback of students. The communication between the teacher and student is regularly maintained and learning material is also provided through blackboard to the students.

### 5. Pre-requirements for this course (if any):

129-PHYS-4 Physics-1

107-CHEM-4 General Chemistry

### 6. Pre-requirements for this course (if any):

### 7. Course Main Objective(s):

This course covers and concentrates on principles of material science such as atomic structure and interatomic bonding, crystal structure of materials, theory of diffusion, imperfections in crystals, mechanical testing and evolution of materials, phase diagram and cooling curves of metals and alloys, iron-carbide diagram for steel and cast iron.

### 2. Teaching mode (mark all that apply)

No	Mode of Instruction	Contact Hours	Percentage
1	Traditional classroom	60	100
2	E-learning		
3	Hybrid <ul style="list-style-type: none"> <li>• Traditional classroom</li> <li>• E-learning</li> </ul>

#### 3. Level/year at which this course is offered:(3<sup>rd</sup> /2<sup>nd</sup>)

### 4. Course General Description:

Engineering mechanics is a foundation course to various engineering curriculum. The primary purpose of the study of engineering mechanics is to develop the capacity to predict the effects of force and motion while carrying out the creative design functions of engineering. This capacity requires knowledge of the physical and mathematical principles of mechanics and the ability to visualize physical configurations. Statics involves study of forces and moments in 2D and 3D systems (which may be a beam, structure, or an object under friction etc.) under the conditions of equilibrium.

### 5. Pre-requirements for this course (if any):

None

### 6. Co-requirements for this course (if any):

None

### 7. Course Main Objective(s):

This course covers major topics such a Introduction to Engineering mechanics, General Principles - Force and Force Vectors, Moments, Equilibrium of a Particle - Force System and Resultants, The concept of static torsors (Center gravity and Moment of Inertia), Structural analysis, Frictionsetc. The teaching method involve theoretical lectures and tutorials on these contents.

### 2. Teaching mode (mark all that apply)

### 3. Level/year at which this course is offered: (4<sup>th</sup> /2<sup>nd</sup>)

### 4. Course General Description:

In this course, students learn how to program in Python to solve engineering problems. In order to perform numerical computations in their field of study in mechanical engineering, the students must undergo rigorous training in logic development and computer programming.

### 5. Pre-requirements for this course (if any):

103-CMS-3 Computer Science

### 6. Pre-requirements for this course (if any):

### 7. Course Main Objective(s):

Upon completion of this course, it is expected that the students will be able to:

- Understand the programming basics in Python (operations, control structures, data types, etc.).
- Understand various data types and control structure in Python.
- Gain proficiency in using Python modules and libraries for scientific computing and data analysis.
- Evaluate the outcome of Python code.
- Develop the ability to collaborate with others to read and write Python programs for mechanical engineering applications.
- Apply computer programming in Python to solve engineering problems.
- Improve problem-solving skills using computational methods.

### 1. Course Identification

#### 1. Credit hours: ( 3 )

2L + 1 P = 3

#### 2. Course type

A.	<input type="checkbox"/> University	<input type="checkbox"/> College	<input checked="" type="checkbox"/> Department	<input type="checkbox"/> Track	<input type="checkbox"/> Others
B.	<input checked="" type="checkbox"/> Required		<input type="checkbox"/> Elective		

#### 3. Level/year at which this course is offered: (4<sup>th</sup> /2<sup>nd</sup>)

#### 4. Course general Description:

This course deals with the fundamental principles of thermodynamics such as heat, work, thermodynamic systems, and the first and second laws of thermodynamics and their applications on thermodynamics engineering problems. Also, this course presents a number of examples and problems concern to processes that occur in some equipment such as power plants, vapor compression refrigerators, thermoelectric coolers and rocket engines.

#### 5. Pre-requirements for this course (if any):

129-PHYS-4 Physics-1

119-MATH-3 Differentiation and Integration

#### 6. Pre-requirements for this course (if any):

#### 7. Course Main Objective(s):

This course covers and concentrates on principles of thermodynamics such as describing what information the First Law of Thermodynamics provides about the “directionality”, or “tendency”, of physical and chemical changes. To state the First and second Laws of Thermodynamics and describe their significance.

#### 3. Level/year at which this course is offered: (4<sup>th</sup> /2<sup>nd</sup>)

### 4. Course General Description:

ME223, Strength of Materials and testing is a 3-credit course designed to students at their fourth level in their respective colleges. This course is an initiation to the mechanical engineering design based on the general concept of stress and strain.

The objective of this course is that the student acquires the basis of Elasticity and Strength of Materials, such as general assumptions and hypothesis for strength of materials theories; different types of loading; normal stress and strain; mechanical properties of materials; Shear stress and strain; analysis of stress and deformation in axially loaded members, Torsion formula in circular shafts; pure bending, shear force and bending moment diagram; stress and strain transformations, MOHR's circle.

### 5. Pre-requirements for this course (if any):

Materials Science 211-ME-5

### 6. Pre-requirements for this course (if any):

### 7. Course Main Objective(s):

This course covers and concentrates on principles of material science such as atomic structure and interatomic bonding, crystal structure of materials, theory of diffusion, imperfections in crystals, mechanical testing and evolution of materials, phase diagram and cooling curves of metals and alloys, iron-carbide diagram for steel and cast iron.

#### 3. Level/year at which this course is offered:(5<sup>th</sup>/3<sup>rd</sup>)

### 4. Course General Description:

This course aims to cover the principles of the conventional machining processes, the different conventional machining operations, the tool and work piece fixation methods, the machine specifications, and the kinematic systems represent main items in this course. Furthermore, the course includes finishing operations and engineering metrology. This course covers the determination of cutting forces (graphically and numerically), and the estimation of the machining times in each operation. Also, it covers the chip breakers in machining and the concept of machinability and its improvement. This course aims to prepare the student to effectively using the non-conventional machining methods.

### 5. Pre-requirements for this course (if any):

211ME-3 Materials Science

221ME-3 Production Technology and Workshop

### 6. Co-requirements for this course (if any):

None

### 7. Course Main Objective(s):

The main aim of this course is to make the students to understand the basic knowledge needed for engineers in the field of conventional and non-conventional machining and develop his information in estimation of machining times and planning of the suitable technological procedures for some machining operations.

## A. General information about the course:

### 1. Credit hours: ( 2 )

2L + 0 P = 2

### 2. Course type

A.	<input type="checkbox"/> University	<input type="checkbox"/> College	<input checked="" type="checkbox"/> Department	<input type="checkbox"/> Track	<input type="checkbox"/> Others
B.	<input checked="" type="checkbox"/> Required		<input type="checkbox"/> Elective		

### 3. Level/year at which this course is offered: ( 5<sup>th</sup> /3<sup>rd</sup> )

### 4. Course General Description:

This course aims to make the students

- Understand the laws of motion, the kinematics of motion and the interrelationship.
- Write the dynamic equilibrium equation.
- Understand the concepts of kinetics and solve engineering problems.

### 5. Pre-requirements for this course (if any):

212-ME-2: Engineering Mechanics (Statics)

### 6. Pre-requirements for this course (if any):

None

### 7. Course Main Objective(s):

Upon completing this course, it is expected that the students will be able to:

- State the principles of dynamics and outline the principles for the idealizations of Statics and Dynamics
- Apply the principles of dynamics to solve engineering problems
- Evaluate and illustrate basic engineering problems independently or in a group

## 1. Teaching mode (mark all that apply)

No	Mode of Instruction	Contact Hours	Percentage

<b>4. Corequisite (or prerequisites, if any) to join Field Experience</b>		
Completion of all coursework up until year three.		
<b>5. Mode of delivery</b>		
<input checked="" type="checkbox"/> In-person/onsite	<input checked="" type="checkbox"/> hybrid (onsite/online)	<input type="checkbox"/> Online

## B. Field Experience Course Learning Outcomes (CLOs), Training Activities and Assessment Methods

Code	Learning Outcomes	Aligned PLO Code	Training Activities	Assessment Methods	Assessment Responsibility
<b>1.0</b>	<b>Knowledge and understanding</b>				
1.1	Outline various technical aspects of the program in the summer training	PLO1.3	Progress report, Final presentation	Maximum marks	Average value
...					
<b>2.0</b>	<b>Skills</b>				
2.1	Apply knowledge and skills to solve problems.	PLO2.1	Final report, Progress report, Final presentation, Final Evaluation	Maximum marks	Average value
2.2	Develop critical thinking for creating novel solutions to the problems	PLO2.2	Final report, Progress report, Final presentation, Final Evaluation (Company)	Maximum marks	Average value
<b>3.0</b>	<b>Values, autonomy, and responsibility</b>				

Code	Learning Outcomes	Aligned PLO Code	Training Activities	Assessment Methods	Assessment Responsibility
3.1	Distinguish between professional and ethical responsibilities	PLO3.1	Final presentation , Final Evaluation	Maximum marks	Average value
3.2	Co-operate in multidisciplinary teams	PLO3.2	Final presentation , Final Evaluation	Maximum marks	Average value

\*Assessment methods (i.e., practical test, field report, oral test, presentation, group project, essay, etc.).

## C. Field Experience Administration

### 1. Field Experience Flowchart for Responsibility

Including units, departments, and committees responsible for field experience identifying by the interrelations.

**Teaching Staff** → Assessing student through various visiting, weekly report, Final report , Presentation.

**Field Supervisor** → Assessing student through Student's performance evaluation form.

### 2. Distribution of Responsibilities for Field Experience Activities

Activities	Department or College	Teaching Staff	Student	Training Organization	Field Supervisor
Selection of a field experience site	✓		✓		✓
Selection of supervisory staff	✓			✓	✓
Provision of the required equipment	✓			✓	
Provision of learning resources	✓			✓	
Ensuring the safety of the site	✓	✓	✓	✓	✓
Commuting to and from the field experience site			✓		
Provision of support and guidance	✓	✓			✓
Implementation of training activities (duties, reports, projects ...)	✓	✓		✓	
Follow up on student training activities		✓			✓
Monitoring attendance and leave		✓			✓
Assessment of learning outcomes		✓			
Evaluating the Quality of Field Experience		✓			✓
Others (specify)					

### 3. Field Experience Location Requirements

Suggested Field Experience Locations	General Requirements*	Special Requirements**
University project management		- Must cover the basic disciplines of electrical engineering
Ben Laden Saudi group	- labs and learning resources	
Abha Airport		
King Khalid Military City	- Availability of modern software and hardware	- Must provide a better and latest software and hardware
Water Services Directorate		
General Directorate of Water in al shqakq	- Availability of modern equipment	- Must provide a better and latest equipment
Jazeera Paints		
General Directorate of Water in Khamis Mushait Region	- The availability of specialized technical centers	- Must provide the latest techniques and specialized programs in the same field
Saudi Electricity Company		
Aramco		
Royal Commission in Jubail		

\* E.g., Provides information technology, equipment, laboratories, halls, housing, learning sources, clinics ... etc.

\*\* E.g., Criteria of the institution offering the training or those related to the specialization, such as safety standards, dealing with patients in medical specialties ... etc.

### 4. Decision-Making Procedures for Identifying Appropriate Locations for Field Experience

The application by the student is accepted if the student satisfies his credits before 6th level and he is not registered any courses in summer term , otherwise it is rejected.

### 5. Safety and Risk Management

Potential Risks	Safety Actions	Risk Management Procedures
The expulsion of training without compelling reasons	Contract an agreement with the company.	Select companies with an agreement in advance.
Injury the trainee during summer training	Contract an agreement with the company.	Select companies with an agreement in advance.
Claim the college with the financial receivables	Contract an agreement with the company.	Select companies with an agreement in advance.

## D. Training Quality Evaluation

Evaluation Areas/Issues	Evaluators	Evaluation Methods
Teaching staff, workload, training program effectiveness and appropriateness, and quality of learning resources employed	Students	Training Evaluation Form

**Evaluation areas** (e.g., Effectiveness of Training and assessment, Extent of achievement of course learning outcomes, Quality of learning resources, etc.)

**Evaluators** (Students, Supervisory Staff, Program Leaders, Peer Reviewer, Others (specify))

**Assessment Methods** (Direct, Indirect)

## E. Specification Approval Data

Council /Committee	Approval by quality committee
Reference No.	QC/02/2025
Date	03/10/2025

2023

TP-153

## Course Specification — (Bachelor)

**Course Title:**Machine Elements Design-1

**Course Code:**411-ME-3

**Program:**Bachelor in Mechanical Engineering

**Department:**Mechanical Engineering

**College:**College of Engineering

**Institution:**King Khalid University, Abha, Saudi Arabia

**Version:**10

**Last Revision Date:**21 June 2023

## A. General information about the course:

### 1. Course Identification

#### 1. Credit hours: ( 3 )

2L + 1 P = 3

#### 2. Course type

A.	<input type="checkbox"/> University	<input type="checkbox"/> College	<input checked="" type="checkbox"/> Department	<input type="checkbox"/> Track	<input type="checkbox"/> Others
B.	<input checked="" type="checkbox"/> Required		<input type="checkbox"/> Elective		

#### 3. Level/year at which this course is offered: (7<sup>th</sup>/4<sup>th</sup>)

#### 4. Course General Description:

This course contains an overview of different types of stresses, materials selection, failure theories, and design of joints. It also covers the design of different machine elements.

#### 5. Pre-requirements for this course (if any):

Strength of Materials & Testing 223-ME-3,  
Mechanical Engineering Drawing 312-ME-3

#### 6. Pre-requirements for this course (if any):

#### 7. Course Main Objective(s):

Recognize the difference between theory and the applied design.

Know different design theories and their applications.

Analyze forces and calculate principal stresses.

Acquire skills in designing simple machine parts.

Acquire skills in using computer in design and drawing

### 2. Teaching mode (mark all that apply)

No	Mode of Instruction	Contact Hours	Percentage
1	Traditional classroom	60	100
2	E-learning		
3	Hybrid <ul style="list-style-type: none"> <li>• Traditional classroom</li> <li>• E-learning</li> </ul>		
4	Distance e-learning		

### 3. Contact Hours (based on the academic semester)

No	Activity	Contact Hours
1.	Lectures	30
2.	Laboratory/Studio	

3.	<b>Field</b>	
4.	<b>Tutorial</b>	30
5.	<b>Others (specify)</b>	
<b>Total</b>		60

## B. Course Learning Outcomes (CLOs), Teaching Strategies and Assessment Methods

Code	Course Learning Outcomes	Code of CLOs aligned with program	Teaching Strategies	Assessment Methods
<b>1.0</b>	<b>Knowledge and understanding</b>			
1.1	Distinguish between theory and the applied design	<b>PLO1.1</b>	Lectures E-learning Tutorials	Assignments Mid and Final Tutorials sheets
<b>2.0</b>	<b>Skills</b>			
2.1	Apply engineering analysis principles and methods to the proper analysis of a variety of common mechanical system components	<b>PLO2.1</b>	Lectures E-learning Tutorials	Assignments Mid and Final Tutorials sheets
2.2	Design mechanical system components so as to perform safely their intended functions in harmony with other components of the system	<b>PLO2.2</b>	Lectures E-learning Tutorials	Assignments Mid and Final Tutorials sheets
<b>3.0</b>	<b>Values, autonomy, and responsibility</b>			
3.1	Use information resources to identify appropriate and elegant component solutions for mechanical system design problems, locate sources for these components, and understand the analysis and design methods for these components	<b>PLO3.3</b>	Lectures E-learning Tutorials	Assignments Mid and Final Tutorials sheets

### C. Course Content

No	List of Topics	Contact Hours
1.	Introduction to design processes, types of stresses, and material selection, Failure theories: static and dynamic.	2
2.	Design of joints: riveted, welded, screwed, and cotter and knuckle joints	2
3.	Couplings design: rigid and flexible	4
4.	Clutches design.	14
5.	Brakes design	8
6.	Springs design	8
7.	Chain drives	14
8.	Power screws design	8
<b>Total</b>		<b>60</b>

### D. Students Assessment Activities

No	Assessment Activities *	Assessment timing (in week no)	Percentage of Total Assessment Score
1.	Quiz-1, Quiz-2 & Quiz-3	6-10-13	15
2.	Midterm-1 & Midterm-2	7-12	30
3.	Tutorial	Weekly	10
4.	Assignments	6, 11	5
5.	Final Exam		40
Total			<b>100</b>

\*Assessment Activities (i.e., Written test, oral test, oral presentation, group project, essay, etc.).

#### 3. Level/year at which this course is offered: ( 7<sup>th</sup> /4<sup>th</sup> )

### 4. Course General Description:

This course covers an introduction to casting technology. Different melting furnaces used in casting. Quality control in sand casting. Permanent die casting. Investment casting. Continuous casting. Plastic deformation processes. Extrusion and rolling process of metals. Different types of Forging techniques and methods of metals. Introduce students to Welding technology. Develop knowledge about polymer processing as well as materials characterizations techniques.

### 5. Pre-requirements for this course (if any):

211-ME-3

221-ME-3

### 6. Pre-requirements for this course (if any):

### 7. Course Main Objective(s):

To equip students with the fundamental principles of key manufacturing processes, including metal forming, casting, and welding.

It focuses on analyzing the mechanics of operations like forging, extrusion, and rolling to understand material behavior and force requirements.

The course also covers associated technologies such as casting methods, welding, and introductory polymer processing.

The ultimate goal is to apply this knowledge to select, design, and control industrial processes for producing high-quality components.

### 2. Teaching mode (mark all that apply)

No	Mode of Instruction	Contact Hours	Percentage
1	Traditional classroom	60	100
2	E-learning

## B. Course Learning Outcomes (CLOs), Teaching Strategies and Assessment Methods

Code	Course Learning Outcomes	Code of CLOs aligned with program	Teaching Strategies	Assessment Methods
<b>1.0</b>	<b>Knowledge and understanding</b>			
1.1	State principles of the forming properties such as fusibility, plasticity, and ductility and choosing the proper processes forming methods	<b>PLO1.1</b>	Lectures E-learning Tutorials	Assignments Mid and Final Tutorials sheets
1.2	List various casting processes and Forming Processes	<b>PLO1.1</b>	Lectures E-learning Tutorials	Assignments Mid and Final Tutorials sheets
<b>2.0</b>	<b>Skills</b>			
2.1	Compare various composite fabrication processes	<b>PLO2.1</b>	Lectures E-learning Tutorials	Assignments Mid and Final Tutorials sheets
<b>3.0</b>	<b>Values, autonomy, and responsibility</b>			
3.1	Show self-confidence to work without supervision in production lab	<b>PLO3.2</b>	Lectures E-learning Tutorials	Assignments Mid and Final Tutorials sheets

Code	Course Learning Outcomes	Code of CLOs aligned with program	Teaching Strategies	Assessment Methods
3.2	Demonstrate ability to work in teams to weld different materials	<b>PLO3.2</b>	Lectures E-learning Tutorials	Assignments Mid and Final Tutorials sheets

### C. Course Content

No	List of Topics	Contact Hours
1	Introduction to casting and different casting techniques. Molding materials and their properties. Sand casting technology, Melting furnaces.	2
2	Solidification of pure metals and alloys. casting defects. Quality control in sand casting. Permanent die casting, Investment casting. Continuous casting.	6
3	Introduction to plastic deformation processes. Extrusion process of metals, Types of Extrusion, Characteristics of extrusion, Extrusion Machines Die Design , Defects , materials, Applications, Numerical Problems.	6
4	Forging of metals, Types of forging process , Forging Equipment's, Defects, Die Design , Forging materials, Applications, Numerical Problems. Principles of Rolling process, Types Rolling process and machines, Defects, Advantages, Applications Numerical Problems.	6
5	Introduction to welding and different welding processes. Soldering, brazing techniques. Fusion welding processes, shielded metal arc welding, Gas metal arc welding, Gas tungsten arc welding. Solid state welding. Welding defects, Welding inspection, Welding symbols.	6
6	General Introduction about material fabrication techniques.	6
7	Introduction to ceramics, types of ceramics, forming techniques of glass ceramics, Casting, spinning, pressing, Blowing, drawing, production of glass fibers, Heat treatment of glasses. Fabrication of clay products; Hydro plastic forming, slip casting, Powder pressing, tape casting.	6
8	Introduction to Polymer Additives.	4
9	Introduction to Fabrication of polymers Extrusion, injection molding, blow molding, Thermoforming, compression molding, Casting, vacuum forming.	6
10	Micro/Nano Injection molding	4
11	Additive Manufacturing Technology (3D Printing)	4
12	Introduction to Materials Characterizations Techniques	4
<b>Total</b>		<b>60</b>

## D. Students Assessment Activities

No	Assessment Activities *	Assessment timing (in week no)	Percentage of Total Assessment Score
1.	Midterm Exam 1	6-7	15%
2.	Midterm Exam 2	11-12	10%
3.	Quizzes, Project and Assignment	2, 8, 3	20%
4.	Lab	Weekly	15%
5.	Final exam		40%
6.	Total		100%

\*Assessment Activities (i.e., Written test, oral test, oral presentation, group project, essay, etc.).

### 4. Course General Description:

This course covers and concentrates on the theory, design, and performance, operation principles of the mechanical measuring devices used in the different engineering applications, the correct methods of measurement, the devices calibration, determination of the zero and standard error, and avoiding the common errors in measurement operations.

### 5. Pre-requirements for this course (if any):

321ME-3: Theory of Machines

### 6. Pre-requirements for this course (if any):

### 7. Course Main Objective(s):

At the end of this course, the students should be able to:

Understand the basic principles of measurement and devices usage.

Know the different measurement ways in the mechanical engineering field.

Gain the skills of using the different measuring devices in the mechanical engineering field.

Gain the accuracy skills in the different measurement operations.

### 2. Teaching mode (mark all that apply)

## A. General information about the course:

### 1. Course Identification

#### 1. Credit hours: ( 3 )

2L + 1 P = 3

#### 2. Course type

A.	<input type="checkbox"/> University	<input type="checkbox"/> College	<input checked="" type="checkbox"/> Department	<input type="checkbox"/> Track	<input type="checkbox"/> Others
B.	<input checked="" type="checkbox"/> Required		<input type="checkbox"/> Elective		

#### 3. Level/year at which this course is offered: ( 8<sup>th</sup> /4<sup>th</sup>)

### 4. Course General Description:

This course is devoted to study the power transmission systems and analyze the stresses on each machine element in the transmission line. The course also deals with the selection of the right power source to drive such systems and the design of shafts, keys, belts, gears and bearings and all other elements involved with transmission line

### 5. Pre-requirements for this course (if any):

Machine Elements Design-1 411-ME-3

### 6. Pre-requirements for this course (if any):

NIL

### 7. Course Main Objective(s):

1. Describe the concept, procedures, and data for stress analysis.
2. Recognize the machine elements in power transmission systems.
3. Acquire competency in sizing and selecting mechanical components for mechanical systems
3. Co

### 2. Teaching mode (mark all that apply)

No	Mode of Instruction	Contact Hours	Percentage
1	Traditional classroom		
2	E-learning		
3	Hybrid <ul style="list-style-type: none"> <li>• Traditional classroom</li> <li>• E-learning</li> </ul>	60	100
4	Distancelearning		

### 3. Contact Hours (based on the academic semester)

No	Activity	Contact Hours
1.	<b>Lectures</b>	30
2.	<b>Laboratory/Studio</b>	30

...				
<b>2.0</b>	<b>Skills</b>			
2.1	Outline the power and refrigeration cycles	<b>PLO2.1</b>	Lectures E-learning Tutorials	Assignments Mid and Final Tutorials sheets
2.2	Apply the thermodynamics relations generally and for simple compressible substances specifically	<b>PLO2.1</b>	Lectures E-learning Tutorials	Assignments Mid and Final Tutorials sheets
2.3	Apply the basics, physical concepts in the practical applications of gas mixtures	<b>PLO2.3</b>	Lectures E-learning Tutorials	Assignments Mid and Final Tutorials sheets
<b>3.0</b>	<b>Values, autonomy, and responsibility</b>			
...				

### C. Course Content

No	List of Topics	Contact Hours
1.	First and second laws of thermodynamics.	4
2.	Power systems with phase change (Concepts of vapor power cycles and their applications: Rankine cycle for vapor power plants, Reheat cycle, and Regenerative cycle. Lab experiment: Steam turbine).	6
3.	Refrigeration systems with phase change (Concepts of refrigeration cycles and their applications: Refrigerators and heat pumps, vapor-compression refrigeration cycle. Selection of the right refrigerant. Heat pump systems. Lab experiment: Heat pump and Industrial refrigeration system).	6
4.	Power systems with working gaseous fluids (Concepts of gas power cycles and their applications: Otto cycle, Diesel cycle, Brayton cycle, and Jet-propulsion cycles. Lab experiment: Gas turbine and two-stage compressor).	5
5.	Refrigeration systems with working gaseous fluids (The air- standard refrigeration).	6
6.	Thermodynamic relations (Maxwell relations, Gibbs equation, Clapeyron equation, Clapeyron-Clausius equation, General relations for the variation of enthalpy, internal energy and entropy and specific heat, Joule-Thomson Coefficient).	12
7.	Gas mixtures (Composition of a gas mixture. P-v-T behavior of gas mixtures. Thermodynamic properties of gas mixtures).	10
8.	Gas-vapor mixtures and air-conditioning (Dry and atmospheric air-Specific and relative humidity of air-Dew-point and wet-bulb temperatures. The psychrometric chart. Air-conditioning processes. Lab experiment: Cooling tower).	6
9.	Chemical reactions (Fuels and combustion and their applications. Theoretical and actual combustion processes. Enthalpy of formation and enthalpy of combustion. Steady-flow and closed reacting systems. First law analysis of reacting systems. Adiabatic flame temperature)	3
<b>Total</b>		<b>60</b>

#### 3. Level/year at which this course is offered: ( 8<sup>th</sup> /4<sup>th</sup> )

### 4. Course General Description:

This course provides the student with in-depth explanation of the hydraulic machines (Hydraulic turbines and pumps) and the vast field of fluid power to understand the design, analysis, operation, maintenance, and application of fluid power systems. The student learns how to design, select and connect pumps. for fluid power system, the student understands fluid power systems operation, components, and hydraulic circuits.

### 5. Pre-requirements for this course (if any):

322-ME-3 Fluid Mechanics

### 6. Pre-requirements for this course (if any):

### 7. Course Main Objective(s):

Upon completing this course, it is expected that the students will be able to:

1. Specify the different types and applications of hydraulic machines.
2. Differentiate between impulse and reaction turbines.
3. Specify the different types and applications of pumps.
4. Evaluate the performance of pumps and turbines by determining hydraulic, volumetric, mechanical, and overall efficiencies.
5. Determine system head losses through a system.
6. Identify how to connect pumps in series and parallel.
7. Specify the basic components of fluid power system, such as pumps, actuator, valves, filters, and reservoirs.
8. Describe the types of hydraulic valves.
9. Describe the construction and design features of hydraulic cylinders.
10. Analyze the operation and performance of hydraulic circuits.

## A. General information about the course:

### 1. Course Identification

#### 1. Credit hours: ( 3 )

2L + 1 P = 3

#### 2. Course type

A.	<input type="checkbox"/> University	<input type="checkbox"/> College	<input checked="" type="checkbox"/> Department	<input type="checkbox"/> Track	<input type="checkbox"/> Others
B.	<input checked="" type="checkbox"/> Required		<input type="checkbox"/> Elective		

#### 3. Level/year at which this course is offered: ( 9<sup>th</sup> /5<sup>th</sup> )

### 4. Course general Description:

The purpose of the course is to cover the fundamentals concepts of feedback control systems properties, representation, and analysis in time and frequency domain. Strong emphasis is given to demonstrate the theoretical material with examples related to real life. Modeling applications are discussed during the lectures and further illustrated with simulation studies. Practical experiments are conducted in the laboratory. The conventional method of classroom interaction between instructor and student is essential. In addition to that, multimedia teaching aids and animations/videos are used for lecture sessions. The communication between the instructor and the students is regularly maintained using blackboard interface and learning material is also provided through blackboard to the students.

### 5. Pre-requirements for this course (if any):

424-ME-3 System Dynamics & Mechanical Vibrations

### 6. Pre-requirements for this course (if any):

### 7. Course Main Objective(s):

The course objective is to enable the students to understand principles of control systems such as classifications of control systems, characteristic of feedback control systems, modelling of mechanical, electrical, electro-mechanical and hydraulic systems, block diagrams reduction. In addition to that, to analyze the performance of the first and second order systems and stability concepts.

### 2. Teaching mode (mark all that apply)

### 3. Level/year at which this course is offered:(9-10<sup>th</sup> /5<sup>th</sup>)

### 4. Course General Description:

Selecting an application topic that relates to the student's specific discipline. Collecting the required information (theoretical and experimental) for the project. Preparing preliminary experiments or developing the required mathematical and/or computational models. Preparing periodical reports that include an introduction about the project, its objectives, and a description of the experimental, mathematical, and/or computational models. Incorporation of engineering standards and realistic constraints, Analysis and Discussions on the results, and writing a complete final report as per the standard format. Presenting the final phase of the project and defending it in front of an examination committee

### 5. Pre-requirements for this course (if any):

Students should pass 125 credit hours

### 6. Pre-requirements for this course (if any):

### 7. Course Main Objective(s):

The graduation project is a project chosen by the student in the final year (in the ninth level). Students start to collect theoretical and practical information about the subject of the project and design and construct an experimental setup or develop a mathematical model. The second phase consists of performing experimental tests or verifying mathematical models using a computer simulation. Finally, the students prepare a final report, present it, and defend it in front of the Committee of project evaluation.

### 4. Course General Description:

This course provides students with an understanding of the thermo-physical principles that govern energy conservation processes of different types and will introduce them to modern computational methods of modeling the performance of energy conversion processes, devices and systems. This course is the capstone experience for ME students, synthesizing thermodynamics, fluid dynamics, heat transfer, and computational analysis tools to facilitate engineering design analysis. This course will provide a foundation for design analysis of energy conversion and systems encountered in a variety of applications.

### 5. Pre-requirements for this course (if any):

422-ME-3: Thermodynamics-2

### 6. Pre-requirements for this course (if any):

NIL

### 7. Course Main Objective(s):

This course will introduce the student to the basic language and concepts of energy, energy conversion and energy storage. Current and emerging technologies for conversion of thermal, mechanical, chemical, nuclear, solar and electrical energy will be discussed along with an introduction to tools that may be used for comparing competing energy conversion technologies.

A.	<input type="checkbox"/> University	<input type="checkbox"/> College	<input checked="" type="checkbox"/> Department	<input type="checkbox"/> Track	<input type="checkbox"/> Others
B.	<input type="checkbox"/> Required		<input checked="" type="checkbox"/> Elective		

#### 3. Level/year at which this course is offered: ( 9-10<sup>th</sup> /5<sup>th</sup> )

### 4. Course General Description:

This course will cover Forms of energy, oil, gas and coal. Combustion processes, energy cycles. Steam generators and their component design, turbines, load curves. Field trips to power plants and other energy installations during laboratory hours.

### 5. Pre-requirements for this course (if any):

413ME-3 (Heat Transfer)

### 6. Pre-requirements for this course (if any):

### 7. Course Main Objective(s):

The course aims to provide the student with the basic concepts required to understanding and solving the power plants and desalination problems applied on engineering. Defining the main principles of theoretical and practical information for different power plants. Acquiring some skills of designing steam power plants, gas turbine power plants, and combined cycle power plant.

#### 3. Level/year at which this course is offered:( 9<sup>th</sup>/10<sup>th</sup>)

#### 4. Course general Description:

This course involved in studying mechanical behavior of a wide variety of materials ranging from conventional metals and alloys, ceramics and polymers to hybrid materials and biomaterials at different length and time scales. Various contents include elastic deformation; viscoelasticity; yielding, plastic flow, plastic instability, strengthening mechanisms; fracture, fatigue, creep; significance of testing mechanical properties.

#### 5. Pre-requirements for this course (if any):

NIL

#### 6. Pre-requirements for this course (if any):

NIL

#### 7. Course Main Objective(s):

The main aim of this course is to provide knowledge on the application of scientific principles to real-life situations, by using appropriate mechanical tests. The major objectives include:

1. To gain an understanding of the dislocation theory and plastic deformation in order to explain strengthening mechanisms in different materials, materials applications in elevated temperature, fundamental of fracture mechanics, microstructure aspects of fracture toughness, transition temperature, environment-assisted cracking, and fatigue crack propagation.
2. To acquire practical experience in the use of mechanical testing equipment and use of scanning electron microscopy for failure analysis.
3. To cultivate interest in understanding the properties of materials required for various real-life applications.

## A. General information about the course:

### 1. Course Identification

<b>1. Credit hours:( 3 )</b>					
3L					
<b>2. Course type</b>					
A.	<input type="checkbox"/> University	<input type="checkbox"/> College	<input checked="" type="checkbox"/> Department	<input type="checkbox"/> Track	<input type="checkbox"/> Others
B.	<input type="checkbox"/> Required		<input checked="" type="checkbox"/> Elective		
<b>3. Level/year at which this course is offered: (10<sup>th</sup>/5<sup>th</sup>)</b>					

### 4. Course general Description:

This course is covers different aspects in composite materials such as classification, applications, processing and fabrication of composites (metal-matrix, ceramic-matrix, reinforced plastics, honeycomb materials, forming structural shapes). Also, Microstructure and mechanical properties of some composite materials will be studied followed by strengthening mechanisms and failure analysis of these types of materials.

### 5. Pre-requirements for this course (if any):

211-ME-3 Materials Science

### 6. Co-requirements for this course (if any):

NIL

### 7. Course Main Objective(s):

At the end of this course, the students should be able to:

1. Understand the basic knowledge of classifications and applications of composite materials.
2. Analyze design considerations and laminate structures.
3. Realize processing and fabrication of composites (metal-matrix, ceramic-matrix, reinforced plastics, honeycomb materials, forming structural shapes).
4. Understand Stress-strain characteristics of fiber-reinforced materials.
5. Describe failure theories of fiber-reinforced materials.
6. Analyze environmentally induced stresses in laminates.

B.	<input type="checkbox"/> Required		<input type="checkbox"/> Elective	<input checked="" type="checkbox"/>	

#### 3. Level/year at which this course is offered: ( 9-10<sup>th</sup> /5<sup>th</sup> )

### 4. Course General Description:

This course deals day lighting, building topology comparison, energy efficient buildings and the role they play in our efforts to address climate change, the optimum cost of energy consumption and building envelope design, the energy consumption in refrigeration, air- conditioning and lighting processes, thermal loads and corrects the power factor, the economic loading and operation for generation units, energy saving policies and use high economic equipment's and improve heat transfer processes, and zero energy homes in hot arid regions, life- cycle considerations and energy efficiency analysis to managing energy demand through equipment selection.

### 5. Pre-requirements for this course (if any):

413ME-3 Heat Transfer

### 6. Pre-requirements for this course (if any):

### 7. Course Main Objective(s):

Upon completing this course, it is expected that the students will be able to:

- ( i ) Estimate the optimum cost of energy consumption.
- ( ii ) Monitoring the energy consumption.
- ( iii ) Saving energy in refrigeration, air- conditioning and lighting processes.
- ( v ) Prediction of thermal loads and correct the power factor.
- ( vi ) Estimate the economic loading and operation for generation units.
- ( vii ) Use energy saving policies and use high economic equipment's and improve heat transfer processes.

### 2. Teaching mode (mark all that apply)

#### 4. Course general Description:

This course aims to define the different types of desalination processes. The multistage flash systems, Multi effect and Reverse Osmosis are the most important desalination processes and will be studied in detail. The analysis of desalination plants will be illustrated.

#### 5. Pre-requirements for this course (if any):

422-ME-3 Thermodynamics – 2

#### 6. Pre-requirements for this course (if any):

#### 7. Course Main Objective(s):

- To provide students with the basic principles required for understanding different desalination methods
- To provide students with insight into the nature of desalination.
- To help students understand fouling, scaling, and pretreatment
- To help students develop the ability to calculate permeates flow rate of RO systems and the total productivity of the other systems.

### 4. Course General Description:

This course addresses the methods of refrigeration-refrigeration cycles: Vapor compression refrigeration cycle absorption refrigeration cycle-refrigerants, evaporators, condensers, compressors, expansion devices, Air conditioning: basics, human comfort, properties of air water vapor mixture, psychrometric processes, psychrometric cycles, psychrometrics.

### 5. Pre-requirements for this course (if any):

Heat Transfer 413-ME-3

### 6. Pre-requirements for this course (if any):

NIL

### 7. Course Main Objective(s):

At the end of this course, the students should be able to:

- Predict the COP of refrigerators and heat pumps,
- Design of evaporators,
- Design of condensers,
- Select and sizing expansion devices,
- Estimating the cooling load, and
- Estimating the air-conditioning load.

### 7. Course Main Objective(s):

Upon completing this course, it is expected that the students will be able to: 1. What is the main purpose for this course?

At the end of this course, the students should be able to:

1. Discuss the nature of metals and alloys.
2. Recite the principles of heat treatment of steels.
3. Explain the heat treatment processes for steels.
4. Assess the hardenability of metals and alloys.
5. Select the quenching media for each heat treatment cycle.
6. Explain the chemical heat treatment of steels.
7. Explain the proper heat treatment cycle for each metal and alloy.
8. Explain the surface hardening treatment for metals and alloys.
9. Explain the thermo-mechanical treatment for ferrous and non-ferrous alloys.
10. Discuss the different types of heat treatment furnaces used in treating metals and alloys.

**2. Teaching mode**(mark all that apply)

No	Mode of Instruction	Contact Hours	Percentage
1	Traditional classroom	60	100

## A. General information about the course:

### 1. Course Identification

#### 1. Credit hours: ( 3 )

1L + 2 P = 3

#### 2. Course type

A.	<input type="checkbox"/> University	<input type="checkbox"/> College	<input checked="" type="checkbox"/> Department	<input type="checkbox"/> Track	<input type="checkbox"/> Others
B.	<input type="checkbox"/> Required		<input checked="" type="checkbox"/> Elective		

#### 3. Level/year at which this course is offered: ( 9-10<sup>th</sup>/5<sup>th</sup> )

### 4. Course General Description:

This course is to teach the students about the basics of the Finite Element Method, a numerical tool used for solving different classes of problems engineering. After introducing the theoretical background of the Finite Element Method, students will be apprised to design, mathematically formulate, find solution and do the analysis on solution to various engineering problems.

### 5. Pre-requirements for this course (if any):

Numerical Methods 419-MATH-3

Machine Design 421-ME-3

### 6. Pre-requirements for this course (if any):

### 7. Course Main Objective(s):

Upon completing this course, it is expected that the students will be able to:

- Describe the procedures of FEM to solve an engineering problem
- Apply the FEM to 1D – Structural, thermal and fluid problems
- Analyze Plane truss problems, using FEA software and manually.
- Formulate axisymmetric and dynamic problems

### 2. Teaching mode (mark all that apply)

No	Mode of Instruction	Contact Hours	Percentage
1	Traditional classroom	75	100
2	E-learning		
3	Hybrid <ul style="list-style-type: none"> <li>• Traditional classroom</li> <li>• E-learning</li> </ul>		
4	Distance learning		

### 3. Contact Hours (based on the academic semester)

No	Activity	Contact Hours
1.	Lectures	15
2.	Laboratory/Studio	60
3.	Field	
4.	Tutorial	
5.	Others (specify)	
<b>Total</b>		<b>75</b>

### B. Course Learning Outcomes (CLOs), Teaching Strategies and Assessment Methods

Code	Course Learning Outcomes	Code of CLOs aligned with program	Teaching Strategies	Assessment Methods
<b>1.0</b>	<b>Knowledge and understanding</b>			
1.1	Outline the basics of the Finite Element Method	PLO1.1	Lectures Tutorials Lab	Quizzes Lab Midterm Assignment
<b>2.0</b>	<b>Skills</b>			
2.1	Formulate the given problem into finite element models	PLO2.2	Lectures Tutorials Lab	Quizzes Lab Midterm Assignment Final
2.2	Apply the mathematical tools to arrive at a finite element formulation	PLO2.1	Lectures Tutorials Lab	Quizzes Lab Midterm Assignment Final
2.3	Apply FEA to solve structural, thermal, and fluid flow problems	PLO 2.1	Lectures Tutorials Lab	Quizzes Lab Midterm Assignment Final
<b>3.0</b>	<b>Values, autonomy, and responsibility</b>			
...				

### C. Course Content

No	List of Topics	Contact Hours
1.	Introduction and Basic Concepts of FEA , Matrix Algebra	10
2.	Analysis of trusses-Two dimensional truss element, Stresses, Strains and temperature changes.	9
3.	Beam bending- Two node beam element, Calculation of stresses in beams.	8
4.	Shape functions, Linear and non-linear 1-D elements	10
5.	Two dimensional boundary value problems using triangular elements, Triangular element for general 2D BVP	14
6.	Iso-parametric quadrilateral elements-Shape functions for rectangular elements, quadrilateral elements, Numerical integration for quadrilateral elements, Four node quadrilateral element for 2D BVP	8
7.	Axisymmetric elasticity problems-Governing equations for axisymmetric elasticity, Axisymmetric linear triangular element..	8
8.	Numerical integration for Quadrilateral elements and Triangular elements	8
<b>Total</b>		<b>75</b>

### D. Students Assessment Activities

No	Assessment Activities *	Assessment timing (in week no)	Percentage of Total Assessment Score
1.	Midterm Exam 1	6-7	15%

#### 3. Level/year at which this course is offered: (9-10<sup>th</sup> /5<sup>th</sup>)

### 4. Course General Description:

The course will introduce students to micro and nano-fabrication techniques. The course will also focus on the type of materials used in such device fabrication. Also, an introduction to Integrated Circuits (IC) fabrication, including Photolithography, Plasma Etching, Thin Film deposition (PVD, CVD, Oxidation, Epitaxy), Wet Processing (silicon etching, metal etches), Surface Micromachining of silicon, and LIGA and UV LIGA (Thick resist lithography, electroplating, molding). The course will also give a basic knowledge about characterization techniques used to characterize micro and nano-structures.

### 5. Pre-requirements for this course (if any):

211ME-3 Materials Science

### 6. Pre-requirements for this course (if any):

NIL

### 7. Course Main Objective(s):

This course aims to introduce students to micro and nano fabrication techniques, especially focusing on integrated circuits (IC), including photolithography, etching, LIGA, and other microscopic fabrications.

#### 3. Level/year at which this course is offered: (8<sup>th</sup> /4<sup>th</sup>)

#### 4. Course general Description:

Design thinking is a powerful approach to problem-solving that is highly relevant to engineering. It equips students with an understanding of the iterative process (Empathize, Define, Ideate, Prototype, Test) and how it can be applied to engineering challenges. This course will encourage students to translate design concepts into market-ready solutions, focusing on scalability, feasibility, and business impact and help the students learn a series of design thinking concepts, methods and techniques that are used to bring innovation in the business and in the social sector.

#### 5. Pre-requirements for this course (if any):

NA

#### 6. Pre-requirements for this course (if any):

NA

#### 7. Course Main Objective(s):

Upon completion of this course, it is expected that the students will be able to:

1. Identify the design principles to guide ideation
2. Apply creativity, brainstorming, and concept generation process in designing needs solutions.
3. Develop prototypes by analyzing the feasibility and effectiveness of solutions
4. Analyze innovation management strategies

#### 1. Credit hours: ( 2 )

2L

#### 2. Course type

A.	<input type="checkbox"/> University	<input type="checkbox"/> College	<input checked="" type="checkbox"/> Department	<input type="checkbox"/> Track	<input type="checkbox"/> Others
B.	<input type="checkbox"/> Required		<input checked="" type="checkbox"/> Elective		

#### 3. Level/year at which this course is offered: ( 8<sup>th</sup> /4<sup>th</sup> )

#### 4. Course General Description:

This course deals with the methods and modern techniques of engineering management analysis for Formulation, decision making, Strategy Analysis, and Implementation, Leadership and Management of Technical People and Team Building, Financial Analysis.

#### 5. Pre-requirements for this course (if any):

NIL

#### 6. Pre-requirements for this course (if any):

NIL

#### 7. Course Main Objective(s):

The overall aim of this course is to apply the system dynamics approach to model and simulate real-world processes/systems in both the public and private sectors. Emphasis is on designing simulation models to explain and improve the problematic dynamic behavior. Students learn to use the system dynamics modelling process: define the dynamics of problems, develop hypotheses for problematic dynamic behavior, analyze and validate computer simulation models, and design policies to improve systemic behavior.

### 2. Teaching mode (mark all that apply)

No	Mode of Instruction	Contact Hours	Percentage

#### 3. Level/year at which this course is offered: ( 3<sup>rd</sup> /2<sup>nd</sup> )

### 4. Course general Description:

Material science is a core mechanical engineering subject and a prerequisite for engineering student. This course give student the fundamental information about what are inside the material by this way student can understand different processing of materials such as mechanical testing and also deformation of materials. The conventional method of classroom interaction between the teacher and student is essential for teaching this subject. At the same time, practical experiments are conducted. All these methods are being followed and any improvement in the implementation shall be made as per the feedback of students. The communication between the teacher and student is regularly maintained and learning material is also provided through blackboard to the students.

### 5. Pre-requirements for this course (if any):

129-PHYS-4 Physics-1

107-CHEM-4 General Chemistry

### 6. Pre-requirements for this course (if any):

### 7. Course Main Objective(s):

This course covers and concentrates on principles of material science such as atomic structure and interatomic bonding, crystal structure of materials, theory of diffusion, imperfections in crystals, mechanical testing and evolution of materials, phase diagram and cooling curves of metals and alloys, iron-carbide diagram for steel and cast iron.

### 2. Teaching mode (mark all that apply)

#### 3. Level/year at which this course is offered: ( Level1 / First Year )

#### 4. Course general Description:

General Chemistry (107Chem-6) is a general introduction to chemistry course that incorporates both lectures and laboratory experiments in developing and understanding chemical concepts and practices.

#### 5. Pre-requirements for this course (if any):

None

#### 6. Pre-requirements for this course (if any):

None

#### 7. Course Main Objective(s):

This course aims to

- Introduce students the basic knowledge and principle in general chemistry.
- The course mainly emphasizes on matters, its properties and measurements, Atoms and the Atomic Theory, Mass Relations in Chemistry, Electronic Structure of Atoms, molecular geometry.
- Properties of solid, liquid and gases
- Developing the student's special abilities in chemistry.

Help students to acquire the skill in chemistry using laboratory.

### 2. Teaching mode (mark all that apply)

### B. Course Learning Outcomes (CLOs), Teaching Strategies and Assessment Methods

Code	Course Learning Outcomes	Code of CLOs aligned with program	Teaching Strategies	Assessment Methods
<b>1.0</b>	<b>Knowledge and understanding</b>			
1.1	To demonstrate the matters and measurement	K1 and K2	Each lecture emphasis the concept to be covered and the details of this concept.	Mid-term exams, final exam, homework, quizzes and discussions.
1.2	Recognize the fundamental principles and concepts of atom, molecule and ions and applications related to this course.	K1 and K2	Lectures. Discussions in lectures and try to engage students	Mid-term exams, final exam, homework, quizzes and discussions
1.3	Summarize the trends and patterns in the context of the periodic table.	K1	Lectures. Many problems to be discussed and solved by the students.	Mid-term exams, final exam, homework, quizzes and discussions.
1.4	Compare between solid, liquid and gases and factors affecting	K4 and K5	Lectures. Many problems to be discussed and solved by the students.	Mid-term exams, Final exam, homework, quizzes, discussions.
<b>2.0</b>	<b>Skills</b>			
2.1	To apply the basic principles of periodic law to predict their various trends	S4	Different web sites on the internet explain the atomic structure. Many text books in library demonstrate the importance of compounds	Mid-term exams and final exam including some questions such as (Explain, discuss, comment, compare, etc)

Code	Course Learning Outcomes	Code of CLOs aligned with program	Teaching Strategies	Assessment Methods
2.2	To apply fundamental principle for the identification the matter, types of matter, atomic structure etc	S4	Explain different examples of matter	Mid-term exams and final exam including some questions such as (Explain, discuss, comment, compare, etc)
3.0	<b>Values, autonomy, and responsibility</b>			
3.1	To present self-teaching for the students and research on the internet	V2, V3 and V4	Homework depending on search in the internet	Evaluation of the homework
3.2	To present an oral explanation for a subject in the area.	V2, V3 and V4	Case study depending on search in the internet	Evaluation
3.3	To show independency for solving problems.	V2	Case study depending on search in the internet	Evaluation

## C. Course Content

No	List of Topics	Contact Hours
1.	• <b>Matter</b> - Its Properties and Measurements: Types of Matter, Quantities and SI-units, Uncertainty and Significant Figures.	8
2.	• Atoms and the atomic theory, Dalton's theory, Modern view of atomic structure, Isotopes, Introduction to the periodic table, Molecular Formula, Empirical or Simplest Formula, Structural Formula, Formula of ionic compounds.	8
3.	<b>Mass Relations in Chemistry:</b> Mole, Molecular Mass, Simplest Formula from Chemical analysis, Molecular Formula from Simplest Formula and Mass Relations in Reactions.	8
4.	• <b>Electronic Structure of Atoms:</b> Electromagnetic Radiation, The Quantum Theory, Bohr's Theory, De-Broglie Principal, The Modern Theory of Atomic Structure, Pauli Exclusion Principle, Hund's Rule, Electronic Configuration, Isoelectronic, Trends in the Properties of Atoms in Periodic Table, Atomic Radius, Ionic Radius of ions, Ionization Energy, Electronegativity.	7
5.	• <b>Liquids, Solids and Intermolecular Forces:</b> Properties of Liquids, Vaporization of Liquids, Vapor Pressure, Some Properties of Solids, Phase Diagrams, Van der Waals Forces, Hydrogen Bonding, Chemical Bonds as Intermolecular Forces.	6
6.	<b>Gases:</b> Properties of Gases, The Simple Gas Laws, The Ideal Gas Equation and The General Gas Equation, Mixtures of Gases, Dalton's Law of Partial Pressure, Graham's Law, Real Gas and van der Waals Equation.	4
7.	Covalent bonding, Lewis structures, octet rule, molecular geometry.	4

Total		45

## A. General information about the course:

### 1. Course Identification

#### 1. Credit hours: ( 4 )

4 (3+1)

#### 2. Course type

A.	<input type="checkbox"/> University	<input type="checkbox"/> College	<input checked="" type="checkbox"/> Department	<input type="checkbox"/> Track	<input type="checkbox"/> Others
B.	<input checked="" type="checkbox"/> Required		<input type="checkbox"/> Elective		

#### 3. Level/year at which this course is offered: (Level 2 / First Year )

#### 4. Course general Description:

- Physics and measurements
- Vectors
- Motion in one dimension
- Laws of Motion and Friction
- Work, Energy and Power
- Elastic Properties of Matter
- Fluid
- Thermal Physics
- Electric Current

#### 5. Pre-requirements for this course (if any):

None

#### 6. Pre-requirements for this course (if any):

None

#### 7. Course Main Objective(s):

The purpose of this course is to introduce the fundamentals of physics to the students. After completion of this course, students will have the knowledge of following :

- Principles of physical measurements, conversion of units, dimensional analysis.
- All algebraic processes related to vector quantities.
- Calculation of different parameters dealing with motion in one dimension (average speed, velocity, instantaneous velocity, instantaneous acceleration, free falling objects)
- Newton's laws of motion, friction force and different applications.
- Work, kinetic energy, work-energy theory and conservative forces. potential energy.
- Buoyant forces, Archimedes principle, pressure of fluids, equation of continuity and Bernoulli's equation.
- Elastic properties of materials.
- Temperature and heat (Specific and Latent)
- Coulomb's law, electric field for point charge and electrical potential.
- Electric conductivity, electric current and electric energy.

### 2. Teaching mode (mark all that apply)

No	Mode of Instruction	Contact Hours	Percentage
1	Traditional classroom	75	100

### 3. Level/year at which this course is offered: (2<sup>nd</sup> Level / 1<sup>st</sup> Year)

### 4. Course General Description:

This course is focus on concept of integration: Identify the correct rule to integrate and use rules to integrate. Identify non-algebraic integrals. Analyze rounding methods and numerical integration. This course introduces students to the basics of integration. It starts with a quick review of derivatives then students learn about antiderivatives of a function. Then students learn some elementary functions which were not covered in Calculus 1 such as exponential and inverse trigonometric functions. Moreover, various integration methods are introduced. Applications of integration are introduced such as finding area, volume, and arc length.

### 5. Pre-requirements for this course (if any):

119 MATH-3

### 6. Pre-requirements for this course (if any):

None

### 7. Course Main Objective(s):

On successful completion of this course, students should be able to:

- Analyze the relationship between differentiation and integration.
- Calculate integrals of basic functions and find area and volume.
- Compare different integration methods and justify the choice for each method

### 2. Teaching mode (mark all that apply)

## B. Course Learning Outcomes (CLOs), Teaching Strategies and Assessment Methods

Code	Course Learning Outcomes	Code of CLOs aligned with program	Teaching Strategies	Assessment Methods
<b>1.0</b>	<b>Knowledge and understanding</b>			
1.1	Knowledge By the end of the course, students should be able to understand functions, differentiation, integration, Area and volume with the help of integration, Definite integral, indefinite integral, A general review of what has been taught in the previous course 129 MATH-3. Focusing on certain concepts: derivation concept and its rules, the study of some usual functions and draw their curves.	K1	Lectures, up today, textbooks, handouts, develop skills in using library and other learning resources,	Exams, tutorials, supervision presentations, essays, feedback on written work and homework.
1.2	Anti-derivative concept, the main theory of anti-derivative, the concept of definite and indefinite integration, area,	K2		

Code	Course Learning Outcomes	Code of CLOs aligned with program	Teaching Strategies	Assessment Methods
	main value theorem, change of variables of integration			
1.3	Calculate the area between a set of curves, types of areas: the area of type Rx and type Ry calculate the rotational volume, calculate the length of an arc, the concept of rotational area and how to calculate.	K1		•
1.4	The concept of a one-to-one function, the concept of the inverse function, the domain and range of the inverse function, how to get the inverse function, the similarity of the curves of the function and its inverse, the derivative of the inverse function without getting the explicit form of it, the concept of logarithmic function as integration, the exponential function as the inverse of the logarithmic function, differentiation and integration of logarithmic and exponential functions, inverse trigonometric functions, differentiation and integration of inverse trigonometric functions, hyperbolic functions, differentiation and integration of hyperbolic functions, inverse hyperbolic functions, differentiation and integration of inverse hyperbolic functions	K4		•
1.5	Integration methods: by parts, trigonometric substitutions, integration of trigonometric functions, partial fractions	K5		
2.0	Skills			

Code	Course Learning Outcomes	Code of CLOs aligned with program	Teaching Strategies	Assessment Methods
2.1	Ability to understand functions, formulas for differentiation of different types of functions	S1	Tutorials, Group working, problem solving, discussion, feedback on written work	Exams, tutorials, supervision, presentations, feedback on written work and homework, critical assessment, peer assessment, self-assessment.
2.2	Understanding of different integration formulas and their applications in different questions	S2		
2.3	Able to use both integration and differentiation together in different types of questions	S1-2		
2.4	Ability to write and implement algorithms to solve different numerical issues.	S1		
3.0	Values, autonomy, and responsibility			
3.1	Adhere to ethical values and excellence in professional practices.	V1	Feedback, experiential learning, structured experiences in groups, self-assessment, profiling.	Critical assessment, self-assessment, Rubrics
3.2	Able to articulate awareness of and demonstrate personal characteristics and critical thinking that positively impact the learning process.	V2		
3.3	Take full responsibility for initiating, identifying, amending, and achieving aims.	V3

A.	<input type="checkbox"/> University	<input type="checkbox"/> College	<input checked="" type="checkbox"/> Department	<input type="checkbox"/> Track	<input type="checkbox"/> Others
B.	<input checked="" type="checkbox"/> Required		<input type="checkbox"/> Elective		

#### 3. Level/year at which this course is offered: (Level 3 / Second Year)

### 4. Course General Description:

This course is to present it in simple and understandable way to students to explain the fundamentals of general as well as engineering physics and its applications in life. They will learn the adaptability to new developments in science and technology during pursuing their engineering degree. As their course contains topics on Vibrations, waves, optics, modern physics and materials science, so they will learn and understand the different phenomenon of engineering physics and its applications as following:

Vibrations (simple harmonic motion, to compute the frequency and period of simple harmonic motion, to determine the position, velocity and acceleration for simple harmonic motion and to compute kinetic, potential and mechanical energy of a simple harmonic oscillator with suitable examples).

Light and sound waves (wave, equation for waves, wave superposition, the nature of sound waves, factors affecting sound waves, sound intensity level of sound waves, Doppler effect, interference, diffraction (single slit) and polarization of light).

Modern physics (Black body radiation, Planck's quantum hypothesis, photoelectric effect, photon, de Broglie wavelength).

Materials Science (Bohr model of atoms, specific heat of solids and Superconductivity).

In addition to some experiments in light and waves, modern physics and materials science.

#### 5. Pre-requirements for this course (if any):

129 PHYS-4

#### 6. Pre-requirements for this course (if any):

None

#### 7. Course Main Objective(s):

After completing this course, the student should be able to know, understand, and use the mathematical concepts and laws related to topics of SHM, waves, optics, modern physics and materials science. On the other hand, the student will be:

1. Familiar with types of oscillations.
2. Intimate with the wave equation and its uses.
3. Understand combination and interference of electromagnetic and sounds waves.
4. Understands basic concepts related to blackbody radiation, photoelectric phenomena, and Compton dispersion.
5. Understands what is meant by semiconductors, their types, and applications
6. Fluent in analyzing practical experiments results and writing reports

## 2. Teaching mode (mark all that apply)

Code	Course Learning Outcomes	Code of CLOs aligned with program	Teaching Strategies	Assessment Methods
1.0	Knowledge and understanding			

Code	Course Learning Outcomes	Code of CLOs aligned with program	Teaching Strategies	Assessment Methods
1.1	Learn the basic theories and experimental results of some phenomena in waves, vibrations, and light.	K1		
1.2	Think in the interest of the concepts and principles of waves, modern physics and superconductivity in engineering.	K2	Lectures and experimental lab.	Homework assignments, short quizzes Write Exams Reports
1.3	Explain the operational principle, analysis, and design of; Standing waves, Newton rings and electrons diffraction.	K3		
<b>2.0</b>	<b>Skills</b>			
2.1	Interpret some physical phenomena in vibrations, optics sound and modern physics.	S1	Lectures and Lab	Exams, Assignments, Quizzes
2.2	Relate the concepts and principles of modern physics and materials science with the engineering applications.	S2	Group discussions	Exams, Assignments, Quizzes
2.3	Write a weekly report including the results, analysis and discussion for each experiment.	S3		
<b>3.0</b>	<b>Values, autonomy, and responsibility</b>			
3.1	Evaluate some scientific problems by students and write the corresponding reports	V1	Discussions	Presentations

Code	Course Learning Outcomes	Code of CLOs aligned with program	Teaching Strategies	Assessment Methods
3.2	Fluent in communicating with others and cooperating with them.	V2	Demonstrations	Group report
3.3	Summarize the main points of the course and develop them through self-learning.	V3		

### C. Course Content

No	List of Topics	Contact Hours
1.	Simple Harmonic Motion	10
2.	One dimensional wave motion and Sound	12
3.	Interference, Diffraction and Polarization of light	9
4.	Plank's quantum theory of radiation	2
5.	Photoelectric effect and photons	2
6.	Compton Scattering	2
7.	Wave properties of particles	2
8.	Atomic Spectra and Bohr model of the atom	2
9.	Lattice vibrations and specific heat of Solids	2
10.	Superconductivity and introduction to Quantum Statistics	2
<b>Total</b>		<b>45</b>

### Practical:

No	List of Topics	Contact Hours
1	General definition of the laboratory (experiments - reports - graph - safety instructions)	2
2	Simple pendulum experiment	2
3	Experiment with standing waves	2

4	Balmer's series of Hydrogen atom experiment	2
5	Tutorial based on experiment 2	2
6	Electron diffraction experiment	4
7	Newton's rings experiment	4
8	Planck constant experiment (Tutorial)	4
9	A review of all laboratory trials with a general discussion of the weekly reports	4
10	Tutorial based on experiment 3-6	4
<b>Total</b>		<b>30</b>

## A. General information about the course:

### 1. Course Identification

<b>1. Credit hours: ( 3 )</b>					
3					
<b>2. Course type</b>					
A.	<input type="checkbox"/> University	<input type="checkbox"/> College	<input checked="" type="checkbox"/> Department	<input type="checkbox"/> Track	<input type="checkbox"/> Others
B.	<input checked="" type="checkbox"/> Required		<input type="checkbox"/> Elective		

**3. Level/year at which this course is offered: (3<sup>rd</sup> Level / 2<sup>nd</sup> Year)**

### 4. Course General Description:

This course discuss the theory of functions of several variables including topics ranging from limits and continuity, partial differentiation up to double integrals (integrals for functions of two variables). The students learn limits continuity and partial differentiation for such kind of functions as well as the chain rule technique, double integral evaluation, and their applications. In the second part, the course focuses on sequences, which are used to build series. The students learn to manipulate sequences and series together with different tests for convergence. The course makes a relation between series and functions of one variable with addressing power series theory and applications.

### 5. Pre-requirements for this course (if any):

**219 MATH-3**

### 6. Pre-requirements for this course (if any):

None

### 7. Course Main Objective(s):

**On successful completion of this course, students should be able to:**

- Describe and distinguish between properties of functions of one variable and several variables
- Describe and distinguish between properties of partial differentiation
- Techniques of double integration
- Describe and distinguish between properties of sequences, series and power series.

## B. Course Learning Outcomes (CLOs), Teaching Strategies and Assessment Methods

Code	Course Learning Outcomes	Code of CLOs aligned with program	Teaching Strategies	Assessment Methods
1.0	<b>Knowledge and understanding</b>			
1.1	By the end of the first part of this course, the student will learn functions of several variables and precisely: Limits, the two-path rule; continuity; partial differentiation; implicit differentiation for functions of two and three variables; chain rule; extrema (local minima and maxima and saddle points); tangent planes and normal lines; double integrals and their applications	K1	Lectures, up today, textbooks, handouts, develop skills in using library and other learning resources,	Exams, tutorials, supervision presentations, essays, feedback on written work and homework.
1.2	Anti-derivative concept, the main theory of anti-derivative, the concept of definite and	K2		

Code	Course Learning Outcomes	Code of CLOs aligned with program	Teaching Strategies	Assessment Methods
	indefinite integration, area, main value theorem, change of variables of integration			
1.3	Calculate the area between a set of curves, types of areas: the area of type Rx and type Ry calculate the rotational volume, calculate the length of an arc, the concept of rotational area and how to calculate.	K1		•
1.4	The concept of a one-to-one function, the concept of the inverse function, the domain and range of the inverse function, how to get the inverse function, the similarity of the curves of the function and its inverse, the derivative of the inverse function without getting the explicit form of it, the concept of logarithmic function as integration, the exponential function as the inverse of the logarithmic function, differentiation and integration of logarithmic and exponential functions, inverse trigonometric functions, differentiation and integration of inverse trigonometric functions, hyperbolic functions, differentiation and integration of hyperbolic functions, inverse hyperbolic functions, differentiation and integration of inverse hyperbolic functions	K4		•
1.5	Integration methods: by parts, trigonometric substitutions, integration of trigonometric functions, partial fractions	K5		
2.0	Skills			

Code	Course Learning Outcomes	Code of CLOs aligned with program	Teaching Strategies	Assessment Methods
2.1	Ability to differentiate between properties of functions of one variable and several variables	S1	Tutorials, Group working, problem solving, discussion, feedback on written work	Exams, tutorials, supervision, presentations, feedback on written work and homework, critical assessment, peer assessment, self-assessment.
2.2	Ability to differentiate between sequences, series and power series.	S2		
2.3...	Use of learned techniques to solve modeling life issues.	S3		
3.0	Values, autonomy, and responsibility			
3.1	Adhere to ethical values and excellence in professional practices.	V1	Feedback, experiential learning, structured experiences in groups, self-assessment, profiling.	Critical assessment, self-assessment, Rubrics
3.2	Able to articulate awareness of and demonstrate personal characteristics and critical thinking that positively impact the learning process.	V2		
3.3	Take full responsibility for initiating, identifying, amending, and achieving aims.	V3		

### C. Course Content

No	List of Topics	Contact Hours
1.	Functions of several variables of several variables, domain and range, level curve of a function. Limits and continuity : limit notation, definition of limit, two-path rule, definition of continuous functions Partial derivatives: Definition of the first partial derivatives, notations for partial derivatives, second partial derivatives.	10
2.	Chain rules: chain rule Lines. Extrema of functions of several variables extrema, test for local extrema.	7
3	Double Integration: Definitions and evaluation theorems for double integrals. Area and Volume Sequences: Notation, definitions and theorems	10

4	Convergent or Divergent Series: Definitions, theorems, nth-term test. Positive- Term Series: Definitions, theorem, Basic and limit comparison tests The Ratio and Root tests. Alternating series and absolute convergence: Definitions, theorems,	12
5	Power series: Definitions, theorems Power series representations of functions: Definitions, theorems Maclaurin and Taylor series	6
<b>Total</b>		<b>45</b>

#### D. Students Assessment Activities

No	Assessment Activities *	Assessment timing (in week no)	Percentage of Total Assessment Score
1.	Practical applications (solutions exercises), quizzes, and homework	Weekly	35
2.	Partial exam (mid Term Exam.)	7	25
3.	Final exam	13	40

\*Assessment Activities (i.e., Written test, oral test, oral presentation, group project, essay, etc.).

#### E. Learning Resources and Facilities

##### 1. References and Learning Resources

Essential References	Calculus of Several Variables, Pence, Dennis D., Cole, Jeffery A., Pence, Dennis, Olinick, Michael, Swokowski, Earl Published by Brooks/Cole Pub Co (1995)
Supportive References	An Introduction to Functions of Several Variables Mariano Giaquinta, Giuseppe Modica, Birkhauser, 2000.
Electronic Materials	<ul style="list-style-type: none"> <li>• Websites on the internet that are relevant to the topics of the course.</li> </ul> E-learning lms.kku.edu.sa
Other Learning Materials	Any book on Integration and Differentiation 3 available at the Central Library.

##### 2. Required Facilities and equipment

Items	Resources
facilities (Classrooms, laboratories, exhibition rooms, simulation rooms, etc.)	Lecture room for 25 students

Items	Resources
Technology equipment (projector, smart board, software)	<ul style="list-style-type: none"> <li>• Data show device, Video Conference system and Smart boards</li> </ul> <p>Computers loaded with modern software and connected to Internet service</p>
Other equipment (depending on the nature of the specialty)	Not Applicable

### 3. Level/year at which this course is offered: (4<sup>th</sup> Level / 2<sup>nd</sup> Year)

### 4. Course General Description:

#### Course Description

This course discusses the vectors in  $R^n$ , vector addition and scalar multiplication, dot (Inner) Product, located vectors in  $R^3$  (Spatial Vectors), and complex vectors in  $C^n$ . Secondly, the course covers the followings:

- **Algebra of Matrices**

Introduction of Matrices, Matrix Addition and Scalar Multiplications, Summation Symbol, Matrix Multiplications, Transpose of a Matrix, Square Matrices, Powers of Matrices, Polynomials in Matrices, Invertible (Nonsingular) Matrices, Special Types of Square Matrices.

- **Systems of Linear Equations**

Introduction and basic definitions, Solutions of equivalent systems, Elementary Operations, Small Square Systems of Linear Equations, Systems in Triangular and Echelon Forms, Gaussian Elimination, Echelon Matrices, Row Canonical Form, Row Equivalence, Gaussian Elimination, Matrix Formulation, Matrix Equation of a System of Linear Equations, Systems of Linear Equations and Linear Combinations of Vectors, Homogeneous Systems of Linear Equations.

- **Vector Spaces**

Introduction of Vector Spaces, Examples of Vector Spaces, Linear Combinations, Spanning Sets, Subspaces, Linear Spans, Row Space of a Matrix, Linear Dependence and Independence, Basis and Dimension, Application to Matrices, Rank of a Matrix, Sums and Direct Sums, Coordinates.

- **Linear Mappings**

Introduction of Mappings, Functions, Linear Mappings (Linear Transformations), Kernel and Image of a Linear Mapping, Singular and Nonsingular Linear Mappings, Isomorphisms, Operations with Linear Mappings.

### 5. Pre-requirements for this course (if any):

None

### 6. Pre-requirements for this course (if any):

None

### 7. Course Main Objective(s):

**On successful completion of this course, students should be able to:**

**This course will introduce students to:**

Linear algebra has in recent years become an essential part of the mathematical background required by mathematicians and mathematics teachers, engineers, computer scientists, physicists, economists, and statisticians, among others. This requirement reflects the importance and wide applications of the subject matter. The first three chapters treat vectors in Euclidean space, matrix algebra, and systems of linear equations. These chapters provide the motivation and basic computational tools for the abstract investigations of vector spaces and linear mappings which follow. After chapters on inner product spaces and orthogonality and on determinants, there is a detailed discussion of eigenvalues and eigenvectors giving conditions for representing a linear operator by a diagonal matrix. This naturally leads to the study of various canonical forms, specifically, the triangular, Jordan, and rational canonical forms.

Code	Course Learning Outcomes	Code of CLOs aligned with program	Teaching Strategies	Assessment Methods
<b>1.0</b>	<b>Knowledge and understanding</b>			
1.1	Describe data graphically and in table- compute measures of centrality, dispersion and variation- Shape parameters (Skewness and Kurtosis)	K1		
1.2	Understand correlation, covariance, correlation coefficient and how these quantities relate to the independence of random variables	K2	Lectures, up-to-date textbooks, hand-outs, develop skills in using library and other learning resources, use of the Internet	Exams, tutorials, supervision, presentations, essays, feedback on written work and homework.
1.3	Compute probabilities by modeling sample spaces and applying rules of permutations and combinations, additive and multiplicative laws and conditional, probability, independence.	K3		

Code	Course Learning Outcomes	Code of CLOs aligned with program	Teaching Strategies	Assessment Methods
1.4	Understand mathematical descriptions of random variables including probability mass functions (PMFs), cumulative distribution functions (CDFs), probability distribution functions (PDFs).	K4		
2.0	<b>Skills</b>			
2.1	Set up and work with discrete random variables. In particular, understand the Bernoulli, binomial, geometric and Poisson distributions.	S1		
2.2	Work with continuous random variables. In particular, know the properties of uniform, normal and exponential distributions.	S2	Tutorials, Group working, problem-solving, discussion, feedback on written work, exam papers, critical assessment, peer assessment, self-assessment.	Exams, tutorials, supervision, presentations, feedback on written work and homework, exam papers, critical assessment, peer assessment, self-assessment.
2.3	Be able to calculate various moments of common random variables including at least means, variances and standard deviations.	S3		
2.4	Be able to calculate the probability density function(pdf) and cumulative distribution function (cdf) of a random variable	S4		
3.0	<b>Values, autonomy, and responsibility</b>			
3.1	Adhere to ethical values and excellence in professional practices.	V1		
3.2	Able to articulate awareness of and demonstrate personal characteristics and critical thinking that positively impact the learning process.	V2	Feedback, experiential learning, structured experiences in groups, self-assessment, profiling.	Critical assessment, self-assessment, Rubrics
3.3	Take full responsibility for initiating, identifying, amending, and achieving aims.	V3

## D. Students Assessment Activities

No	Assessment Activities *	Assessment timing (in week no)	Percentage of Total Assessment Score
1.	Practical applications (solutions exercises), quizzes, and homework	Weekly starting from the 3rd week	30
2.	Partial exam ( mid-term exam)	8th or 9th	30
3.	Final exam		40

\*Assessment Activities (i.e., Written test, oral test, oral presentation, group project, essay, etc.).

## E. Learning Resources and Facilities

### 1. References and Learning Resources

Essential References	<i>Elementary Statistics: A Step-by-Step Approach</i> by Allan G. Bluman is the 10th Edition, published in 2018 by McGraw-Hill Education. The print ISBN is 9781259755330.
Supportive References	Work out statistics for Advanced level (Ball. A. and Buckwell, G.)
Electronic Materials	<ul style="list-style-type: none"> <li>Websites such as Stack Overflow and YouTube channels like Stat Quest offer valuable resources relevant to the course topics, providing insights and explanations that can aid learning.</li> <li>E-learning Platform: The KKU Learning Management System (<a href="http://lms.kku.edu.sa">lms.kku.edu.sa</a>) is a convenient hub for course materials and online learning resources.</li> <li>Academic Articles from journals, including the Journal of Statistics Education, can deepen understanding by illustrating real-world applications of statistical concepts.</li> </ul>
Other Learning Materials	<ul style="list-style-type: none"> <li>Flashcards, such as those offered by Quizlet, are useful tools for reinforcing memory and facilitating quick reviews.</li> <li>Mobile applications (Apps) like StatDisk assist students with calculations and data analysis, making them valuable resources for students engaged in statistics.</li> </ul>

### 2. Required Facilities and equipment

Items	Resources
facilities (Classrooms, laboratories, exhibition rooms, simulation rooms, etc.)	Lecture room for 15 students

Items	Resources
Technology equipment (projector, smart board, software)	Data show device, Video Conference system and Smart boards
Other equipment (depending on the nature of the specialty)	Not Applicable

## F. Assessment of Course Quality

Assessment Areas/Issues	Assessor	Assessment Methods
Effectiveness of teaching	Students, Peer Reviewers	Indirect
Effectiveness of students assessment	Peer Reviewers	Direct
Quality of learning resources	Students, Peer Reviewers	Indirect
The extent to which CLOs have been achieved	Faculty, Program Leaders	Direct
Other: Quality of learning outcome	Quality and Development Committee	Report

**Assessors** (Students, Faculty, Program Leaders, Peer Reviewer, Others (specify)

**Assessment Methods** (Direct, Indirect)

## A. General information about the course:

### 1. Course Identification

<b>1. Credit hours: ( 4 )</b>					
3					
<b>2. Course type</b>					
A.	<input type="checkbox"/> University	<input type="checkbox"/> College	<input checked="" type="checkbox"/> Department	<input type="checkbox"/> Track	<input type="checkbox"/> Others
B.	<input checked="" type="checkbox"/> Required		<input type="checkbox"/> Elective		

**3. Level/year at which this course is offered: (6<sup>th</sup> Level / 3<sup>rd</sup> Year)**

### 4. Course General Description:

**This course covers the following points:**

- Rounding error, conditioning, and numbers representation on computers
- Numerical methods to solve nonlinear equations:
- Bisection method, fixed-point method, Newton method, approximation, and error analysis.
- System of nonlinear equations: Newton method
- System of linear equation:
- Direct methods: Gauss elimination, partial pivoting.
- Iterative methods: Jacobi method, Gauss-Seidel method, error analysis.
- Functions' interpolation and approximation:
- Polynomial approximations: exact, missing, and experimental data. Finite differences,
- Lagrange interpolation, Newton formula, best approximation, error analysis.
- Cubic splines interpolation: Natural cubic splines.
- Numerical integration.
- Use MATLAB for the numerical algorithms.

### 5. Pre-requirements for this course (if any):

**319 MATH-3 Differential equations**

### 6. Pre-requirements for this course (if any):

**None**

### 7. Course Main Objective(s):

**On successful completion of this course, students should be able to:**

- Solve mathematical problems difficult to solve analytically as finding the roots of equations and computing the integrals.
- Use direct and iterative methods for solving systems of linear equations.
- Use interpolation and least squares for Data modeling.

- **Analyze the approximation error.**
- **Use MATLAB for the numerical algorithms.**

## 2. Teaching mode (mark all that apply)

No	Mode of Instruction	Contact Hours	Percentage
1	Traditional classroom		
2	E-learning		
3	Hybrid <ul style="list-style-type: none"> <li>• Traditional classroom</li> <li>• E-learning</li> </ul>	45	100
4	Distance learning		

## 3. Contact Hours (based on the academic semester)

No	Activity	Contact Hours
1.	Lectures	45
2.	Laboratory/Studio	--
3.	Field	--
4.	Tutorial	--
5.	Others (specify)	--
<b>Total</b>		45

## B. Course Learning Outcomes (CLOs), Teaching Strategies and Assessment Methods

Code	Course Learning Outcomes	Code of CLOs aligned with program	Teaching Strategies	Assessment Methods
<b>1.0</b>	<b>Knowledge and understanding</b>			
1.1	Recognize the computer arithmetic, error analysis; solving nonlinear equations in one variable.	K1	Lectures, up-to-date textbooks, hand-outs, develop skills in using library and other learning	Exams, tutorials, supervision, presentations, essays, feedback on
1.2	Knowing the direct and iterative methods for solving linear systems	K2		

Code	Course Learning Outcomes	Code of CLOs aligned with program	Teaching Strategies	Assessment Methods
1.3	Recognize the interpolation and polynomial approximation, cubic spline interpolation; least squares approximation	K3	resources, use of the Internet.	written work and homework.
1.4	Recognize the numerical differentiation and integration.			
2.0	<b>Skills</b>			
2.1	Ability to differentiate between analytical solutions and (approximate) numerical solutions	S1	Tutorials, Group working, problem-solving, discussion, feedback on written work, exam papers, critical assessment, peer assessment, self-assessment.	Exams, tutorials, supervision, presentations, feedback on written work and homework, exam papers, critical assessment, peer assessment, self-assessment.
2.2	Ability to choose and use different numerical methods	S2		
2.3	Ability to check the error analysis of numerical methods.	S3		
2.4	Ability to write and implement algorithms to solve different numerical issues.	S4		
3.0	<b>Values, autonomy, and responsibility</b>			
3.1	Adhere to ethical values and excellence in professional practices.	V1	Feedback, experiential learning, structured experiences in groups, self-assessment, profiling.	Critical assessment, self-assessment, Rubrics
3.2	Able to articulate awareness of and demonstrate personal characteristics and critical thinking that positively impact the learning process.	V2		
3.3	Take full responsibility for initiating, identifying, amending, and achieving aims.	V3		

### C. Course Content

No	List of Topics	Contact Hours
1.	Rounding error, conditioning, and numbers representation on computers	3
2.	<b>Numerical methods to solve nonlinear equations:</b>	6

	Bisection method, fixed-point method, Newton method, approximation, and error analysis.	
3	System of nonlinear equations: Newton method	6
4	<b>System of linear equation:</b> <ul style="list-style-type: none"> <li>Direct methods: Gauss elimination, partial pivoting.</li> <li>Iterative methods: Jacobi method, Gauss-Seidel method, error analysis</li> </ul>	10

## A. General information about the course:

### 1. Course Identification

<b>1. Credit hours:( 2 )</b>					
<b>2L + 0 P = 2</b>					
<b>2. Course type</b>					
A.	<input type="checkbox"/> University	<input type="checkbox"/> College	<input type="checkbox"/> Department	<input type="checkbox"/> Track	<input type="checkbox"/> Others
B.	<input type="checkbox"/> Required		<input type="checkbox"/> Elective		
<b>3. Level/year at which this course is offered: (4<sup>th</sup> /2<sup>nd</sup> )</b>					

### 4. Course General Description:

Creativity and innovation are integral to an organization's ability to survive and thrive in today's competitive marketplace. The main purpose of the course is to provide ample training and exposure to the students to be able to work independently and innovatively in new projects and work assignments. The specific aim is to inculcate innovation based thinking ability to approach professional challenges.

### 5. Pre-requirements for this course (if any): NIL

### 6. Pre-requirements for this course (if any): NIL

### 7. Course Main Objective(s):

This course covers and concentrates on principles of material science such as atomic structure and interatomic bounding, crystal structure of materials, theory of diffusion, imperfections in crystals, mechanical testing and evolution of materials, phase diagram and cooling curves of metals and alloys, iron-carbide diagram for steel and cast iron.

### 2. Teaching mode (mark all that apply)

No	Mode of Instruction	Contact Hours	Percentage

### 3. Level/year at which this course is offered: (5<sup>th</sup> / 3<sup>rd</sup> )

### 4. Course general Description:

This course develops students' ability to write clear, concise, and well-organized technical reports for engineering and scientific contexts. It covers essential elements such as report structure, data presentation, visual aids, referencing, and formal language use. Students learn to communicate technical information effectively to both specialist and non-specialist audiences. Emphasis is placed on clarity, objectivity, and professional formatting standards. By the end of the course, students will be able to plan, draft, edit, and present comprehensive technical reports aligned with industry expectations.

### 5. Pre-requirements for this course (if any): NIL

012 ENG-6

### 6. Course Main Objective(s):

1. To help develop communicative writing skills
2. To enrich the understanding of the roles that writing and reading play in activities outside and inside the university.
3. To offer a structured approach to writing.
4. To familiarize students with the process of writing.
5. To develop their grammar and mechanical writing skills.
6. To enable students to write technical reports.

### 2. Teaching mode (mark all that apply)

2.1	Manipulate cash flow to obtain equivalent values	KLO1	Lectures Discussion Tutorial sheets	Quiz Assignment Mid Exam Final Exam
2.2	Form alternatives and derive cost/benefit estimates	KLO5	Lectures Discussion Tutorial sheets	Quiz Assignment Mid Exam Final Exam
2.3	Compare alternatives with unequal economic lives	KLO5	Lectures Discussion Tutorial sheets	Quiz Assignment Mid Exam Final Exam
2.4	Perform after tax cash flow, apply depreciation accounting rules M	KLO5	Lectures Discussion Tutorial sheets	Quiz Assignment Mid Exam Final Exam
2.5	Analyze inflation and uncertainty in analysis.	KLO5	Lectures Discussion Tutorial sheets	Quiz Assignment

Code	Course Learning Outcomes	Code of CLOs aligned with program	Teaching Strategies	Assessment Methods
				Mid Exam Final Exam
2.6	Analyse depreciation plan for machine data using professional ethics and professional responsibility	KLO5	Lectures Discussion Tutorial sheets	Quiz Assignment Mid Exam Final Exam
2.7	Design and analysis project management plan	KLO7	Lectures Discussion Tutorial sheets	Quiz Assignment Mid Exam Final Exam
2.8	Construct project acceptance plan criteria	KLO7	Lectures Discussion Tutorial sheets	Quiz Assignment Mid Exam Final Exam
3.0	Values, autonomy, and responsibility			

### C. Course Content

No	List of Topics	Contact Hours
1.	Introduction to the Economy	4
2.	Basics in Engineering Economy	6
3.	Breakeven Analysis	4
4.	Cash flow and equivalence	6
5.	The formulas	6
6.	Depreciation	4
<b>Total</b>		<b>30</b>

## D. Students Assessment Activities

No	Assessment Activities *	Assessment timing (in week no)	Percentage of Total Assessment Score
1.	E-learning-based activities (Online Quizzes, Assignments)	Weekly	25%
2.	Midterm Exam 1	6	15%
3.	Midterm Exam 2	11	15%
4.	Group Discussions / Attendance / Participation	Weekly	5%
5.	Final exam		40%
6.	Total		100%

\*Assessment Activities (i.e., Written test, oral test, oral presentation, group project, essay, etc.).

## E. Learning Resources and Facilities

### 1. References and Learning Resources

Essential References	Basics of Engineering Economy, Blank, Leland T. and Tarquin, Anthony J., 2nd Ed., McGraw-Hill, 7th Ed., 2021, ISBN-. 1260571149, 9781260571141
Supportive References	Engineering Economy, William G. Sullivan. Elin M. Wicks and James Luxhoj, 16 th ed., Prentice Hall, 2021, ISBN-13: 978-0-13-343927-4 ISBN-10: 0-13-343927-5

## A. General information about the course:

### 1. Course Identification

#### 1. Credit hours: ( 3 )

0 L + 6 P = 3

#### 2. Course type

A.	<input type="checkbox"/> University	<input type="checkbox"/> College	<input checked="" type="checkbox"/> Department	<input type="checkbox"/> Track	<input type="checkbox"/> Others
B.	<input checked="" type="checkbox"/> Required		<input type="checkbox"/> Elective		

#### 3. Level/year at which this course is offered: ( 10<sup>th</sup> /5<sup>th</sup> )

#### 4. Course General Description:

This course deals with the methods and modern techniques of engineering management analysis for Formulation, decision making, Strategy Analysis, and Implementation, Leadership and Management of Technical People and Team Building, Financial Analysis.

#### 5. Pre-requirements for this course (if any):

NIL

#### 6. Pre-requirements for this course (if any):

NIL

#### 7. Course Main Objective(s):

- Augmentation of engineering knowledge with advanced understanding of business and management practices.
- Understand the importance of management skills to succeed in scientific or engineering enterprise management roles.
- Getting introduced to analytical skills to cover the gap between engineering and business management

### 2. Teaching mode (mark all that apply)

No	Mode of Instruction	Contact Hours	Percentage
1	Traditional classroom	30	100
2	E-learning		
3	Hybrid <ul style="list-style-type: none"> <li>Traditional classroom</li> <li>E-learning</li> </ul>		
4	Distancelearning		

### 3. Contact Hours (based on the academic semester)

No	Activity	Contact Hours

1.	<b>Lectures</b>	
2.	<b>Laboratory/Studio</b>	30
3.	<b>Field</b>	
4.	<b>Tutorial</b>	
5.	<b>Others (specify)</b>	
<b>Total</b>		30

## B. Course Learning Outcomes (CLOs), Teaching Strategies and Assessment Methods

Code	Course Learning Outcomes	Code of CLOs aligned with program	Teaching Strategies	Assessment Methods
<b>1.0</b>	<b>Knowledge and understanding</b>			
1.1	Understand and distinguish different management functions and skills.	KLO1	Lectures, class discussion, Power point presentation	Class work - home work, and final exams.
...				
<b>2.0</b>	<b>Skills</b>			
2.1	Analyze problems that face the management and put them in a form capable of being solved of engineering parts	KLO7	Lectures, class discussion, Power point presentation	Class work, homework, and final exams.
2.2	Employ ethical and professional responsibilities in engineering situations.	KLO7	Lectures, class discussion, Power point presentation	Midterm exams and Final exams
<b>3.0</b>	<b>Values, autonomy, and responsibility</b>			
3.1	Demonstrate the importance of effective communication by which the organization acquires competitive advantages	KLO7	Lectures, class discussion, Power point presentation	Midterm exams and Final exams
...				

### C. Course Content

No	List of Topics	Contact Hours
1.	Introduction to management paradigms	2
2.	Management challenges for engineers	6
3.	The functions of engineering management	4
4.	Organizing	4
5.	Leading	4
6.	Controlling	6
7.	Creativity and innovation	4
8.	Ethics	4
9.	Engineering management in the new millennium	2
Total		30

### D. Students Assessment Activities

No	Assessment Activities *	Assessment timing (in week no)	Percentage of Total Assessment Score
1.	Quizzes, Assignments, Project	After completing some specified topics	35 %
2.	Midterm- 1	7	25 %
12.	Final Exam		40%
13.	Total		100%

\*Assessment Activities (i.e., Written test, oral test, oral presentation, group project, essay, etc.).

#### 3. Level/year at which this course is offered: ( 3<sup>rd</sup> /2<sup>nd</sup> )

### 4. Course general Description:

Material science is a core mechanical engineering subject and a prerequisite for engineering student. This course give student the fundamental information about what are inside the material by this way student can understand different processing of materials such as mechanical testing and also deformation of materials. The conventional method of classroom interaction between the teacher and student is essential for teaching this subject. At the same time, practical experiments are conducted. All these methods are being followed and any improvement in the implementation shall be made as per the feedback of students. The communication between the teacher and student is regularly maintained and learning material is also provided through blackboard to the students.

### 5. Pre-requirements for this course (if any):

129-PHYS-4 Physics-1

107-CHEM-4 General Chemistry

### 6. Pre-requirements for this course (if any):

### 7. Course Main Objective(s):

This course covers and concentrates on principles of material science such as atomic structure and interatomic bonding, crystal structure of materials, theory of diffusion, imperfections in crystals, mechanical testing and evolution of materials, phase diagram and cooling curves of metals and alloys, iron-carbide diagram for steel and cast iron.

### 2. Teaching mode (mark all that apply)

No	Mode of Instruction	Contact Hours	Percentage
1	Traditional classroom	60	100
2	E-learning		
3	Hybrid <ul style="list-style-type: none"> <li>• Traditional classroom</li> <li>• E-learning</li> </ul>

### 4. Course General Description:

The overall aim of this course is to introduce the concepts, theory and practice of engineering professionalism and ethics. It will allow to understand the moral problems faced in the corporate setting and wider philosophical frameworks along with social importance and their intellectual challenges are given its due placement. It is important that students have to be not only technically competent, but socially accountable in their careers. Hence, this course expect them to learn to share ideas and concepts, working in teams on majority of the case studies to have enough sensitivity to engineering professionalism.

#### 5. Pre-requirements for this course (if any):

-

#### 6. Pre-requirements for this course (if any):

### 7. Course Main Objective(s):

This course provides students with experiences and knowledge related to the ethics and practice of the profession, behavioral values in dealing, duties, and rights while practicing the profession

### 4. Course General Description:

Engineering Entrepreneurship introduces engineering students to the concepts and practices of technology entrepreneurial thinking and entrepreneurship. It explores all aspects of the creation of a new venture from idea through startup, growth, and beyond.

This course aims to make the students to

- Gain knowledge of the context, concepts, process, types, and importance of entrepreneurship
- Focus on creativity, Innovation, and intellectual property rights.
- Develop an insight into how entrepreneurs conceive, adapt, and execute strategies to create new, successful businesses.

### 5. Pre-requirements for this course (if any):

NIL

### 6. Pre-requirements for this course (if any):

NIL

### 7. Course Main Objective(s):

This course aims to provide the background necessary to understand the entrepreneurial approach to business and the tools required to function effectively in the competitive entrepreneurial environment. At the end of this course, the students should be able to:

- Explain and analyze the entrepreneurial process from generating creative ideas to exploring feasibility to creating an enterprise for implementing the ideas.
- Experience the dynamics of participating on a business team and the power inherent in a team relative to individual effort.
- Create and present a business plan for a technology idea.
- Provide the background, tools, and life skills to participate in the entrepreneurial process within a large company, in a new venture, or as an investor.

## F. Assessment of Course Quality

Assessment Areas/Issues	Assessor	Assessment Methods
Effectiveness of teaching	Students	Indirect (through course evaluation survey)
Effectiveness of students assessment	Faculty and Quality Committee	Direct (through Rubrics)
Quality of learning resources	Students and faculty	Indirect (through university experience and mission-vision-PEO surveys)
The extent to which CLOs have been achieved	Quality Committee	Direct (through Rubrics)

**Assessors** (Students, Faculty, Program Leaders, Peer Reviewer, Others (specify)

**Assessment Methods** (Direct, Indirect)

### G. Specification Approval

COUNCIL /COMMITTEE	Reviewed by Curriculum Committee Approved by Quality Committee
REFERENCE NO.	
DATE	20-08-2023

TP-153

## Course Specification — (Bachelor)

**Course Title:** Electrical Engineering 1

**Course Code:** 218-EE-3

**Program:**

**Department:** Electrical Engineering

**College:** College of Engineering

**Institution:** King Khalid University

**Version:** Course Specification Version Number

**Last Revision Date:** Pick Revision Date.

## Table of Contents

<b>A. General information about the course:</b> .....	3
<b>B. Course Learning Outcomes (CLOs), Teaching Strategies and Assessment Methods</b> .....	4
<b>C. Course Content</b> .....	5
<b>D. Students Assessment Activities</b> .....	5
<b>E. Learning Resources and Facilities</b> .....	5
<b>F. Assessment of Course Quality</b> .....	6
<b>G. Specification Approval</b> .....	6

## A. General information about the course:

### 1. Course Identification

#### 1. Credit hours: (3)

#### 2. Course type

A.  University  College  Department  Track  Others  
 B.  Required  Elective

#### 3. Level/year at which this course is offered: (5<sup>th</sup> /3<sup>rd</sup>)

#### 4. Course General Description:

This course covers the fundamental knowledge of the electric circuit, introduces Basic concepts, components of Electric Circuits, and explains the methodologies used to solve electrical circuits. The course provides a detailed coverage of the various topics such as Ohm's law & Kirchhoff's laws, Resistance, Inductors, Capacitors, and battery combinations, Techniques for solving DC electric circuits, and AC Steady-state Analysis.

#### 5. Pre-requirements for this course (if any):

119-MATH-3 , 129-PHYS-4

#### 6. Co-requisites for this course (if any):

#### 7. Course Main Objective(s):

This course provides the basic concepts and theories for the analysis of electrical circuits. It offers an understanding of the methodologies used to solve electrical circuits and has expertise in the study of electrical circuits. Use Kirchhoff's laws, circuit theorems, and node voltage methodology to solve DC and AC circuits and demonstrate a basic understanding of batteries, Resistors, Inductors, and Capacitors and its connections.

### 2. Teaching mode (mark all that apply)

No	Mode of Instruction	Contact Hours	Percentage
1	Traditional classroom	60	100
2	E-learning		
3	Hybrid <ul style="list-style-type: none"> <li>• Traditional classroom</li> <li>• E-learning</li> </ul>		
4	Distance learning		

### 3. Contact Hours (based on the academic semester)

No	Activity	Contact Hours
1.	Lectures	36

2.	<b>Laboratory/Studio</b>	24
3.	<b>Field</b>	
4.	<b>Tutorial</b>	
5.	<b>Others (specify)</b>	
<b>Total</b>		60

## B. Course Learning Outcomes (CLOs), Teaching Strategies and Assessment Methods

Code	Course Learning Outcomes	Code of CLOs aligned with program	Teaching Strategies	Assessment Methods
<b>1.0</b>	<b>Knowledge and understanding</b>			
1.1	Identify the basic concepts, components of electric circuits, and Ohm's & Kirchhoff's laws	KLO1	Classroom Laboratory Experiment Videos Discussions Self-learning	Major Exam Assignments Quizzes Lab Work Final Exam
<b>2.0</b>	<b>Skills</b>			
2.1	Analyze the current using various DC theorems	KLO2	Classroom teaching Laboratory Experiments Discussions/Presentation	Major Exam Assignments Quizzes Lab Work Final Exam
2.2	Analyze DC networks by applying various laws and theorems	KLO2		
2.3	Demonstrate basic proficiency in building basic electrical circuits and operating fundamental electrical engineering equipment	KLO4		
2.4	Analyze the sinusoidal electrical quantities mathematically as well as graphically in the form of waveforms/phasors, and analyze the AC circuits to determine the unknown quantities.	KLO1		
2.5	Connect and analyze Series and Parallel Connection of Resistors, Inductors, Capacitors, and Batteries	KLO3		
<b>3.0</b>	<b>Values, autonomy, and responsibility</b>			
3.1				

### C. Course Content

No	List of Topics	Contact Hours
1.	Introduction - SI units, basic concepts of charge, current, voltage, electrical active and passive elements, power, energy, electrical sources-independent and dependent voltage, and current sources.	5
2.	Fundamental concepts of electrical circuits-Ohm's Law, series and parallel circuits, node, loop, branch, mesh.	5
3.	Kirchhoff's current and voltage law, the concept of open circuit, and short circuit.	5
4.	VDR on No-Load operation, VDR under Load	4
5.	Star-delta transformations.	4
6.	Nodal analysis.	4
7.	Mesh analysis.	4
8.	Source transformation, superposition theorem	4
9.	Thevenin's theorem, Norton's theorem, maximum power transfer theorem.	3
10.	Series and parallel connection of Batteries.	4
11.	Determining the Internal Resistance of batteries connected in series and Parallel	4
12.	'j' operator, rectangular and polar coordinates- periodic and non-periodic waveforms-instantaneous, peak, average, and rms values-ac circuit configurations, phase angle,	5
13.	Inductors and Capacitors	
14.	Phasor diagram.	5
15.	Power factor-apparent, active, and reactive power	4
<b>Total</b>		<b>60</b>

### D. Students' Assessment Activities

No	Assessment Activities *	Assessment timing (in week no)	Percentage of Total Assessment Score
1.	Assignments and (or) HomeWorks and (or) Mini-Projects	4, 6, 10	20%
2.	Quizzes	5, 7, 9, 11	20%
3.	Midterm	8, 13	20%
4.	Lab work	----	
5.	Final Exam		40%

\*Assessment Activities (i.e., Written test, oral test, oral presentation, group project, essay, etc.).

### E. Learning Resources and Facilities

#### 1. References and Learning Resources

Essential References	1. Basic Engineering Circuit Analysis, J. D. Irwin, 12th edition, Macmillan, 2020
Supportive References	1. Engineering Circuit Analysis (6th), 2002, W. H. Hayt, J.E. Kemmerly, and S. Durbin. 2. Electronic Devices and Circuit Theory (7th) by R. Boylestad and L. Nashelsky. 2016

## A. General information about the course:

### 1. Course Identification

#### 1. Credit hours: (3)

#### 2. Course type

A.  University  College  Department  Track  Others  
 B.  Required  Elective

#### 3. Level/year at which this course is offered: (6<sup>th</sup> /3<sup>rd</sup>)

#### 4. Course General Description:

This course covers the concepts, principles of operation, performance characteristics and methods of control of the induction motors, DC motors, fractional horse-power motors, and different types of electrical motors. This course introduces the basic knowledge of Electrical Machines (DC and AC). Topics include the basics of the magnetic (principle of generation), Discuss the different types of transformers, List transformer symbols and formulas, know how DC machine works, the Use the equivalent circuit of DC Motors to investigate it, Know how AC machine works and Can determine the equivalent circuit parameter from tests

#### 5. Pre-requirements for this course (if any):

218-EE-3

#### 6. Co-requisites for this course (if any):

#### 7. Course Main Objective(s):

This course introduces the basic knowledge of Electrical Machines (DC and AC). Topics include how to Learn the basics of the magnetic (principle of generation), discuss the different types of transformers, List transformer symbols and formulas, know how DC machine works, Use the equivalent circuit of DC Motors to investigate it, know how AC machine works, and can determine the equivalent circuit parameter from tests

### 2. Teaching mode (mark all that apply)

No	Mode of Instruction	Contact Hours	Percentage
1	Traditional classroom	60	100
2	E-learning

<b>Total</b>		<b>60</b>

## B. Course Learning Outcomes (CLOs), Teaching Strategies and Assessment Methods

Code	Course Learning Outcomes	Code of CLOs aligned with program	Teaching Strategies	Assessment Methods
<b>1.0</b>	<b>Knowledge and understanding</b>			
1.1	Define basic concepts of the principle of operation of the electric DC & AC machines, their types, construction, and the principle of working.	KLO1	Classroom Laboratory Experiment Videos Discussions Self-learning	Major Exam Assignments Quizzes Lab Work Final Exam
1.2	Understanding of the construction, connections, and principle of operation of single-phase and three-phase induction motor.	KLO1	Classroom Laboratory Experiment Videos Discussions Self-learning	Major Exam Assignments Quizzes Lab Work Final Exam
<b>2.0</b>	<b>Skills</b>			
2.1	Analyze and differentiate between types of machines.	KLO1	Classroom teaching Laboratory Experiments Discussions/Presentation	Major Exam Assignments Quizzes Lab Work Final Exam
2.2	Analyze DC and AC networks by applying various laws and theorems	KLO2		
<b>3.0</b>	<b>Values, autonomy, and responsibility</b>			
3.1	Apply the suitable machine for the application.	KLO9	Classroom teaching Laboratory Experiments Discussions/Presentation	Major Exam Assignments Quizzes Lab Work Final Exam

### C. Course Content

No	List of Topics	Contact Hours
1.	Magnetic Circuits: Magnetic circuit definition, Magnetic circuit concept and analogy, Magnetization curves of ferromagnetic materials, Magnetic circuit losses	12
2.	Transformers: Introduction and construction, Theory of operation, Equivalent circuit, Equivalent circuit parameter determination from tests, Voltage regulation and efficiency	12
3.	Direct Current (DC) Machines: Introduction and construction, Generation of unidirectional voltage, Induced EMF equation, DC machines classification, Equivalent circuit of DC generator, DC generator characteristics, Equivalent circuit of Dc Motor, DC Motor characteristics	12
4.	AC Machines: Introduction and construction, Three-phase Induction Motors, Equivalent circuit and performance calculation, Power and torque calculation, Torque-Speed characteristics	12
5.	Synchronous Machines: Introduction and construction, Generation EMF equation, Equivalent circuit, Equivalent circuit parameter determination from tests	12
<b>Total</b>		<b>60</b>

### D. Students Assessment Activities

No	Assessment Activities *	Assessment timing (in week no)	Percentage of Total Assessment Score
1.	Assignments and (or) HomeWorks and (or) Mini-Projects	4, 6, 10	20%
2.	Quizzes	5, 7, 9, 11	20%
3.	Midterm	8, 13	20%
4.	Lab work	----	
5.	Final Exam	15	40%

\*Assessment Activities (i.e., Written test, oral test, oral presentation, group project, essay, etc.).
